Appendix A: Service Area Description

Appendix B: Age Group Detail

Appendix C: Deaths by Age Group

Appendix D: Maternal and Infant Health

Appendix E: Community Consultation Participants

## Section 1: Executive Summary

This section includes:

---

- Overview of the process and methods used to conduct the 2013 Community Health Needs Assessment
- Summary of how the service area was determined
- Listing of communities in the UCLA Health System Service Area
- Summary of demographics in the UCLA Health System Service Area
- Summary of UCLA Health System Service Area demographics compared to Los Angeles County demographics
- Summary of health access and utilization indicators in Service Planning Area (SPA) 5 benchmarked to Healthy People 2020 targets
- Summary of Health Professional Shortage Areas for Primary Care and Mental Health
- Summary of leading causes of death in UCLA Health System Service Area
- Summary of age-adjusted death rates in UCLA Health System Service Area benchmarked to Healthy People 2020 targets
- Summary of birth demographics in UCLA Health System Service Area compared to birth demographics in Los Angeles County
- Summary of birth and infant outcomes in UCLA Health System Service Area benchmarked to Healthy People 2020 targets
- Summary of child and adolescent health indicators in SPA 5 benchmarked to Healthy People 2020 targets
- Summary of adult health indicators in SPA 5 benchmarked to Healthy People 2020 targets
- Summary of senior health indicators in SPA 5 benchmarked to Healthy People 2020 targets
- Listing of top health issues in the community identified in the community consultation
- Listing of populations or neighborhood areas most affected by top health issues
- Summary of significant priority health needs identified in the Community Health Needs Assessment
- Summary of health care facilities and other resources in UCLA Health System Service Area

Key used to summarize UCLA Health System Service Area or SPA 5 experiences benchmarked to Healthy People 2020 targets:

---

Target Met

Target Not Met

Result is Statistically Unstable

## **Process and Methods**

This community health needs assessment brings together a variety of demographic and health information, gathered from both primary and secondary data sources.

The first phase of the community health needs assessment involved collection and analysis of numerous demographic and health status and data and information for the UCLA Health System Service Area. The following types of data were analyzed: population, household and family demographics; birth statistics, death statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors. Wherever possible, the service area health experience was benchmarked to Healthy People 2020 targets. In addition, to assist with providing context to the demographics, the UCLA Health System Service Area is compared to Los Angeles County.

The second phase of the needs assessment focused on qualitative primary research. Representatives from UCLA Health System agreed that telephone interviews with academic experts, health department contacts, community leaders and representatives from public and private organizations would be a cost effective approach to gain an understanding of important health issues and potential opportunities to collaborate with these organizations.

## **Service Area Determination**

UCLA Health System management determined that the optimal service area to employ for all three of its hospitals — Ronald Reagan UCLA Medical Center, Santa Monica UCLA Medical Center and Orthopaedic Hospital, and Resnick Neuropsychiatric Hospital at UCLA — is the Los Angeles County Department of Health West Service Planning Area (SPA) 5. The reasons to use SPA 5 are multi-fold:

- UCLA Health System could have a greater impact on the community health needs of local, proximal residents versus a broader geography
- UCLA Health System would not be redundant in addressing community health needs with other area hospitals and health systems, which might be more likely to occur in a broader geographic area with more acute care providers
- Los Angeles County Department of Public Health and the California Health Interview Survey (conducted by UCLA Center for Health Policy Research) provide health assessment data for SPA 5 that serve as another information resource in identifying needs and assessing improvement

## Service Area Definition and Description

Note: Findings are based on 2013 demographic estimates

UCLA Health System defined its service area for purposes of the 2013 Community Health Needs Assessment to include the following communities:

- Beverly Hills
- Bel Air
- Culver City
- Culver City/Ladera
- Westchester
- Brentwood
- Westwood
- Century City
- Mar Vista
- Palms
- West Los Angeles
- Malibu
- Pacific Palisades
- Santa Monica
- Venice
- Marina del Rey
- Playa del Rey
- Playa Vista

The service area population (2013) is estimated at 656,728 persons. The population in the service area is forecast to increase 3.6 percent in the next five years, to 680,116 persons. Growth projections for households and families are estimated to increase 3.8 percent and 3.6 percent. The following table summarizes the service area population, households, and families as well as the percent change projected for 2018 (over a five-year period).

### Summary of Population, Households and Families

UCLA Health System Service Area

2013

Description	Number		Percent Change From 2013 to 2018
	2013	2018	
Demographics			
Population	656,728	680,116	3.6%
Households	297,248	308,464	3.8%
Families	140,876	145,965	3.6%

Source: Nielsen

To assist with providing context to the service area demographics, key statistics are compared to Los Angeles County for 2013 in the following table. Of note, in comparison to Los Angeles County, the service area has a *higher* proportion of:

- Five-year growth in population, households and families
- Persons age 25 to 34 years, 35 to 44 years, 55 to 64 years, 65 to 74 years, 75 to 84 years, and 85 years and older
- Persons of non-Hispanic White race, some other race, and two or more races
- Persons 5 years and older speaking English only, a European language, and other language at home
- Persons 25 years and older with Bachelor degree and Graduate or Professional degree
- Persons 16 years and older employed in the labor force
- Employed persons with white collar occupations
- 1-person and 2-person households
- Households with no children under 18 years of age present
- Households with incomes of \$75,000 to \$99,999; \$100,000 to \$149,999; \$150,000 to \$199,999; and \$200,000 and over
- Renter occupied households
- Families at or above the poverty level

### Summary of Demographic Highlights

UCLA Health System Service Area Compared to Los Angeles County

2013

Indicator	Percent	
	Service Area	LA County
<b>5-Year Change (2013 to 2018)</b>		
Population	3.6%	3.0%
Households	3.8%	3.2%
Families	3.6%	3.0%
<b>Age Group</b>		
0 to 4 Years	4.7%	6.6%
5 to 14 Years	8.7%	13.0%
15 to 20 Years	7.2%	8.7%
21 to 24 Years	6.0%	6.0%
25 to 34 Years	17.5%	14.9%
35 to 44 Years	15.1%	14.3%
45 to 54 Years	13.8%	13.9%
55 to 64 Years	12.2%	11.1%
65 to 74 Years	8.0%	6.5%
75 to 84 Years	4.4%	3.5%
85 Years and Older	2.5%	1.6%
<b>Race/Ethnicity</b>		
White	61.4%	27.1%
Black	5.7%	8.0%
Asian, Native Hawaiian or Pacific Islander	13.0%	14.1%
Hispanic	15.6%	48.5%
American Indian or Alaskan Native	0.1%	0.2%
Some Other Race	0.4%	0.3%
Two or More Races	3.7%	1.9%
<b>Language Spoken at Home by Persons 5 Years and Older</b>		
English Only	65.6%	42.9%
Spanish	13.0%	39.7%
Asian or Pacific Island Language	7.7%	10.9%
European language	11.5%	5.3%
Other language	2.2%	1.1%
<b>Educational Attainment of Persons 25 Years and Older</b>		
Less than 9 <sup>th</sup> Grade	3.7%	14.2%

Indicator	Percent	
	Service Area	LA County
Some High School, no Diploma	3.1%	10.0%
High School Graduate (or GED)	10.9%	20.4%
Some College, no Degree	17.1%	19.5%
Associate Degree	5.2%	6.7%
Bachelor Degree	34.2%	19.0%
Graduate or Professional Degree	25.9%	10.1%
<b>Employment Status of Persons 16 Years and Older</b>		
In Armed Forces	0.1%	0.1%
In Labor Force, Employed	61.9%	57.8%
In Labor Force, Unemployed	6.2%	7.3%
Not in Labor Force	31.8%	34.8%
<b>Occupation Type for Employed Labor Force</b>		
Blue Collar	5.6%	20.5%
White Collar	82.8%	60.7%
Service and Farming	11.6%	18.9%
<b>Household Size</b>		
1-Person	38.5%	24.4%
2-Persons	33.3%	26.2%
3-Persons	13.4%	16.3%
4-Persons	9.4%	14.9%
5-Persons	3.5%	8.8%
6-Persons	1.2%	4.5%
7 or more Persons	0.7%	5.0%
<b>Households by Presence of Children Under 18 Years of Age</b>		
No Children Under 18 Years Present	79.7%	62.5%
Children Under 18 Years Present	20.3%	37.5%
<b>Household Income</b>		
Under \$15,000	11.0%	12.9%
\$15,000 to \$34,999	14.7%	20.9%
\$35,000 to \$74,999	26.0%	30.9%
\$75,000 to \$99,999	11.8%	11.7%
\$100,000 to \$149,999	15.3%	12.7%
\$150,000 to \$199,999	7.9%	5.3%
\$200,000 and over	13.4%	5.5%
<b>Owner and Renter Occupied Housing Units</b>		
Owner Occupied	41.0%	47.5%

Indicator	Percent	
	Service Area	LA County
Renter Occupied	59.0%	52.5%
<b>Families by Poverty Status</b>		
Below the Poverty Level	6.9%	13.5%
At or Above the Poverty Level	93.1%	86.5%

## Health Care Access and Utilization

Note: Findings are based on the 2009 California Health Interview Survey for SPA 5 and 2012 designated mental health and primary care Health Professional Shortage Areas in the Medical Service Study Areas approximating the service area

When comparing health access indicators in the SPA to Healthy People 2020 objectives, the SPA did not meet the objectives related to: medical insurance among non-elderly persons (insured all or part of the year), usual source of ongoing care, delays in getting medical care, and delays in getting prescription medicines. The SPA experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Health Access and Utilization Indicators

Los Angeles County Service Planning Area 5 - West  
2009

Indicator	Age Group	Healthy People 2020 Objective		SPA 5 West	
		Good	Target Rate	Rate	Status
Health Access					
Insured All or Part of Year	0 to 64	↑	100%	90.0%	-
Usual Source of Ongoing Care	All Ages	↑	95.0%	91.9%	-
Delays in Getting Medical Care	All Ages	↓	4.2%	15.4%	-
Delays in Getting Prescription Medicines	All Ages	↓	2.8%	8.9%	-
Cancer Screening					
Mammogram in Past 2 Years Females	50 to 74	↑	81.1%	88.9%	+
Colorectal Cancer Screening	50 to 75	↑	70.5%	72.3%	+

Notes:

↓ Indicates that the Healthy People 2020 objective is to reduce; ↑ indicates that the objective is to increase

Source: UCLA Center for Health Policy Research

The service area includes six Medical Service Study Areas (MSSA). In these MSSAs, there are four Primary Care Health Professional Shortage Areas and one Mental Health Professional Shortage Area. Of note, the MSSA that includes Mar Vista/Ocean Park/Santa Monica South/Venice is designated both a Primary Care and Mental Health Professional Shortage Area.

**Health Professional Shortage Areas: Primary Care and Mental Health**

Medical Service Study Areas in UCLA Health System Service Area

2012

Medical Service Study Area (MSSA)	Health Professional Shortage Area	
	Primary Care	Mental Health
Bel Air/Beverly Glen/Beverly Hills/Brentwood/Malibu/Pacific Palisades/Santa Monica Northwest/Topanga (78.2aa)		
Baldwin Hills/Culver City South/Fox Hills/Ladera Heights/Marina del Rey/View Park/Windsor Hills(78.2j)		
Santa Monica Central/Sawtelle/West Los Angeles (78.2kkkkk)	▲	
Century City/Cheviot Hills/Rancho Park/West Los Angeles/Westwood (78.2w)	▲	
Culver City North/Palms (78.2y)	▲	
Mar Vista/Ocean Park/Santa Monica South/Venice (78.2z)	▲	▲

*Note:*

▲ Indicates that Medical Service Study Area is a designated shortage area

*Source: Office of Statewide Planning and Development*

# Mortality

Note: Findings are based on three-year averages of deaths that occurred among residents of the service area during 2008 through 2010

On average, there were 4,039 deaths a year in the service area. Heart disease and cancer were the two leading causes of death in the service area, accounting for 53.5 percent of all deaths. Other leading causes of death in the service area are summarized in the table below.

## Profile of Deaths, Ranked by Cause of Death

UCLA Health System Service Area

Three-Year Average (2008 to 2010)

Cause of Death	Number	Percent
Diseases of the heart	1,107	27.4%
Coronary heart disease	868	21.5%
Cancer (All Sites)	1,054	26.1%
Lung cancer	219	5.4%
Colorectal cancer	98	2.4%
Breast cancer	94	2.3%
Prostate cancer	62	1.5%
Stroke	249	6.2%
Alzheimer's disease	210	5.2%
Chronic Obstructive Pulmonary Diseases	184	4.6%
Pneumonia/Influenza	182	4.5%
Unintentional Injuries (All Types)	121	3.0%
Motor Vehicle Crashes	32	0.8%
Diabetes	92	2.3%
Suicide	72	1.8%
Cirrhosis	46	1.1%
Homicide	15	0.4%
HIV Infection	11	0.3%
Unknown	20	0.5%
All Other	676	16.7%
<b>All Causes</b>	<b>4,039</b>	<b>100.0%</b>

Note: Number of deaths rounded

Source: California Department of Public Health

When comparing age-adjusted death rates in the service area to Healthy People 2020 objectives, the service area met all of the established objectives. The service area experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Age-Adjusted Death Rates by Cause of Death

UCLA Health System Service Area

Three-Year Average (2008 to 2010)

Cause of Death	Age Group	Healthy People 2020 Objective		UCLA Health System Service Area	
		Good	Target Rate	Rate	Status
Health Status					
Coronary Heart Disease	All	↓	100.8	98.7	+
Stroke	All	↓	33.8	28.5	+
Cancer (All Sites)	All	↓	160.6	128.8	+
Lung	All	↓	45.5	27.0	+
Colorectal	All	↓	14.5	11.9	+
Prostate	All	↓	21.2	18.2	+
Female Breast	All	↓	20.6	20.7	+
Chronic Pulmonary Diseases	45+	↓	98.5	58.5	+
Diabetes-Related	All	↓	65.8	43.8	+
Unintentional Injuries (All Types)	All	↓	36.0	16.2	+
Motor Vehicle Accidents	All	↓	12.4	4.5	+
Homicide	All	↓	5.5	2.3	*
Suicide	All	↓	10.2	9.6	+
Cirrhosis	All	↓	8.2	5.7	+
HIV Infection	All	↓	3.3	1.4	*

Notes:

↓ Indicates that the Healthy People 2020 objective is to reduce

Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population

Source: California Department of Public Health

## Maternal and Infant Health

Note: Findings are based on three-year averages of live births that occurred in the service area during 2009 through 2011

On average, there were 6,856 births a year in the service area. To assist with providing context to the service area births, key birth demographics are compared to Los Angeles County in the following table. Of note, in comparison to Los Angeles County, the service area has a *higher* proportion of births to:

- Mothers of White, Asian or Pacific Islander, and other/unknown race/ethnicity
- Mothers age 30 to 34 years and 35 years and older

### Summary of Birth Demographic Highlights

UCLA Health System Service Area Compared to Los Angeles County  
Three-Year Average (2009 to 2011)

Description	Service Area	Los Angeles County
<b>Births (Number)</b>		
2009	6,908	139,679
2010	6,936	133,160
2011	6,725	130,312
<b>Three-Year Average</b>	<b>6,856</b>	<b>134,384</b>
<b>Births by Mother's Race/Ethnicity (Percent)</b>		
White	53.4%	18.0%
Black	5.0%	7.6%
Asian or Pacific Islander	16.2%	11.9%
Hispanic	19.0%	61.0%
Native American or Alaskan	0.1%	0.1%
Other and Unknown	6.2%	1.3%
<b>Births by Mother's Age (Percent)</b>		
Under 20 Years	1.7%	8.8%
20 to 29 Years	23.8%	45.7%
30 to 34 Years	35.8%	25.5%
35 Years and Over	38.6%	20.0%
Unknown	0.0%	0.0%

Note: Percentages rounded

Source: California Department of Public Health

When comparing maternal and infant health indicators in the service area to Healthy People 2020 objectives, the service area met all of the objectives. The service area experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Maternal and Infant Health Indicators

UCLA Health System Service Area

Three-Year Average (2009 to 2011)

Indicator	Healthy People 2020 Objective		UCLA Health System Service Area	
	Good	Target Rate	Rate	Status
<b>Pregnancy/Birth Outcome</b>				
Early Prenatal Care	↑	93.7%	77.9%	+
Low Birth Weight Infants	↓	7.4%	7.8%	+
Very Low Birth Weight Infants	↓	1.1%	1.4%	+
<b>Infant Outcome</b>				
Infant Mortality Rate (per 1,000 live births)	↓	3.6	6.0	+

Notes:

↑ Indicates that the Healthy People 2020 objective is to increase; ↓ indicates that the objective is to reduce

Infant mortality rate is three-year average from 2008 to 2010

Source: California Department of Public Health

## Child and Adolescent Health

Note: Findings are based on 2009 California Health Interview Survey for SPA 5 and 2011 Los Angeles County Department of Public Health Survey for SPA 5

When comparing child and adolescent health indicators in the SPA to Healthy People 2020 objectives, the SPA met the objective related to parenting practices (Note: Results are statistically unstable for measures related to health access and health behaviors). The SPA experience compared to Healthy People 2020 national objectives is summarized in the table below.

### Summary of Child and Adolescent Health Indicators

Los Angeles County Service Planning Area 5 - West

2009 and 2011

Indicator	Age Group	Healthy People 2020 Objective		SPA 5 West	
		Good	Target Rate	Rate	Status
Health Access					
Insured All or Part of Year	0 to 17	↑	100%	94.7%	*
Usual Source of Ongoing Care	0 to 17	↑	100%	94.2%	*
Health Behaviors					
Obese	12 to 17	↓	16.1%	1.0%	*
Currently Smoke Cigarettes	14 to 17	↓	16.0%	3.4%	*
Binge Drinking	12 to 17	↓	8.6%	5.6%	*
Parenting Practices					
Read to Daily by a Parent or Family Member	0 to 5	↑	52.6%	79.3%	+

Notes:

↓ Indicates that the Healthy People 2020 objective is to reduce; ↑ indicates that the objective is to increase

Sources: UCLA Center for Health Policy Research and Los Angeles County Department of Public Health

## Adult Health

Note: Findings are based on 2009 California Health Interview Survey for SPA 5 and 2011 Los Angeles County Department of Public Health Survey for SPA 5

When comparing adult health indicators in the SPA to Healthy People 2020 objectives, the SPA did not meet the objectives related to health access for: medical insurance (insured all or part of the year) and related to health behaviors for: currently smoke cigarettes. The SPA experience compared to Healthy People 2020 national objectives is summarized in the following table.

### Summary of Adult Health Indicators

Los Angeles County Service Planning Area 5 - West  
2009 and 2011

Indicator	Age Group	Healthy People 2020 Objective		SPA 5 West	
		Good	Target Rate	Rate	Status
Health Access					
Insured All or Part of Year	18 to 64	↑	100%	88.6%	-
Usual Source of Ongoing Care	18 to 64	↑	89.4%	90.3%	+
Health Behaviors					
Recommended Aerobic Exercise	18 +	↑	47.9%	66.5%	+
Recommended Muscle Strengthening	18 +	↑	24.1%	44.1%	+
Recommended Aerobic and Muscle Strengthening	18 +	↑	20.1%	37.4%	+
Healthy Weight	20 to 64	↑	33.9%	52.8%	+
Obese	20 to 64	↓	30.5%	12.4%	*
Diagnosed with High Blood Pressure	18 to 64	↓	26.9%	15.3%	+
Currently Smoke Cigarettes	18 to 64	↓	12.0%	15.3%	-

Notes:

↓ Indicates that the Healthy People 2020 objective is to reduce; ↑ indicates that the objective is to increase

# Senior Health

Note: Findings are based on 2009 California Health Interview Survey for SPA 5

When comparing senior health indicators in the SPA to Healthy People 2020 objectives, the SPA did not meet the objectives related to health access for: flu shot received in past year; and related to health behaviors for: diagnosed with high blood pressure. The SPA experience compared to Healthy People 2020 national objectives is summarized in the table below.

## Summary of Senior Health Indicators

Los Angeles County Service Planning Area 5 - West

2009

Indicator	Age Group	Healthy People 2020 Objective		SPA 5 West	
		Good	Target Rate	Rate	Status
Health Access					
Usual Source of Ongoing Care	65+	↑	100%	95.3%	*
Flu Shot in Past Year	65+	↑	90%	73.0%	-
Health Behaviors					
Healthy Weight	65+	↑	33.9%	46.7%	+
Obese	65+	↓	30.5%	22.4%	*
Diagnosed with High Blood Pressure	65+	↓	26.9%	57.2%	-
Currently Smoke Cigarettes	65+	↓	12.0%	3.9%	*

Note: ↓ Indicates that the Healthy People 2020 objective is to reduce; ↑ indicates that the objective is to increase

Source: UCLA Center for Health Policy Research

## Community Consultation

The following were identified as the community's top health issues (based on frequency of mention):

- Care and coordination of chronic health conditions
- Wellness and disease prevention
- Mental health disorders
- Substance abuse and addiction
- Aging population
- Homelessness
- Dental care

Many of those participating in the interviews responded that low socio-economic status was generally associated with these health issues. Neighborhood areas specifically identified by those participating in the interviews included:

- Venice (near Rose Avenue)
- Santa Monica (Pico neighborhood near the 10 freeway)
- Mar Vista (along the 10 freeway)
- West Los Angeles (persons living in housing projects)
- Palms
- Culver City
- Culver City/Ladera

## Process and Criteria Used

In preparing the community health needs assessment, UCLA Health System combined quantitative data about service area demographics, availability of health insurance, health access to and utilization of key services, health status, and health behaviors with qualitative data on opinions of important health issues in the community.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2020 target not met
- Number of persons affected
- Identification and/or validation as an important health issue in the community consultation
- Identified by community organizations as an opportunity to work collaboratively to address health issue

## **Significant Priority Health Needs Identified**

Note: Findings are based on review of data and information and community input

- Access to health care addressing care and management of chronic health conditions
- Health promotion and disease prevention
- Mental health disorders
- Substance abuse and addiction

## **Health Care Facilities and Other Resources**

Note: Findings are based on 2012 listing of health care facilities located in the service area

The following health care facilities and other resources are located in the ZIP codes of the service area:

- 13 licensed free and community clinics
- 3 psychology clinics
- 10 open hospitals (one hospital is in suspense)

## **Section 2: Process and Methods**

This section includes:

---

- Description of secondary data and information
- Description of analytical methods applied
- Identification of information gaps
- Summary of process for community consultation
- Identification of third party contractor

## **Process and Methods**

This community health needs assessment brings together a variety of demographic and health information, gathered from both primary and secondary data sources.

The first phase of the community health needs assessment involved collection and analysis of demographic and health status data and information for the UCLA Health System Service Area. The following types of data were analyzed: population, household and family demographics; birth statistics, death statistics, designated Health Professional Shortage Areas, large-scale household telephone surveys designed to measure health access, utilization of health services, and health behaviors.

The second phase of the needs assessment focused on qualitative primary research. Representatives from UCLA Health System agreed that telephone interviews with academic experts, health department contacts, and representatives from public and private community organizations would be a cost effective approach to gain an understanding of important health issues and potential opportunities to collaborate with these organizations.

### **Sources of the Data**

The following sources of data and information were used in this community health needs assessment:

- California Department of Education
- California Department of Public Health
- Los Angeles County Department of Public Health
- Los Angeles Homeless Services Authority
- Nielsen
- Office of Statewide Health Planning and Development
- RAND California
- UCLA Center for Health Policy Research
- United States Department of Health and Human Services

### **Dates of the Data**

All data and information reviewed in the community health needs assessment used the most recent available. The table on the next page summarizes the dates of the data used.

### Dates of the Data Used in the Community Health Needs Assessment

Description	Date of Data
Demographics	2013
Homeless Persons	2011
Primary Care and Mental Health Shortage Areas	2012
Health Access and Utilization	2009
Deaths and Death Rates	2008 – 2010
Years of Potential Life Lost Before Age 75	2009
Births and Birth Outcomes	2009 – 2011
Health Behaviors	2009 and 2011
Students Enrolled in Free or Reduced Price Meals	2011/2012 School Year
High School Dropouts	2011/2012 School Year
Health Care Facilities and Resources	2012

### Analytical Methods Applied

In many instances, health status information is based on multiple years of data and was used to establish three-year averages for the service area. Widely accepted health measurements – such as infant mortality rate, age-adjusted death rate, low birth weight infants, and pregnant women with early entry into prenatal care – were used in this community health needs assessment. To assist with prioritization of health issues, secondary data and information is benchmarked to Healthy People 2020 targets.<sup>1</sup> In addition, comparisons to local, regional, and state figures are applied.

### Information Gaps

Information gaps were most apparent in two health areas: mental health and oral health. In both cases, robust quantitative data was not readily available and as a result it was not possible to benchmark the service area experience to Healthy People 2020 targets.

For some indicators – such as medical insurance for children age 0 to 17 years, usual source of care for children age 0 to 17 years, obesity, age-adjusted death rate due to homicide, and binge drinking by adolescents – data were not statistically reliable at the service area level due to small sample size.

---

<sup>1</sup> Prepared by the U.S. Department of Health and Human Services, Healthy People 2020 outlines a nationwide agenda focused on promoting health and preventing illness, disability, and premature death. Healthy People 2020 builds on initiatives pursued over the past three decades.

# **Community Consultation**

## **Process**

UCLA Health System identified a diversified list of contacts – including academic experts, health department contacts, and representatives from community organizations – for participation in the telephone interviews for the Community Health Needs Assessment. Each person was then invited via phone and/or email, to participate in the community consultation. Upon agreement to participate, individuals were sent a letter confirming participation, via email. The letter included an overview of the community consultation, the questions to be asked, and a UCLA contact for any questions or comments. In the next few weeks, the project consultant scheduled and completed telephone interviews with all contacts.

## **Third Party Contractor**

UCLA Health System retained Debbie N. Alpers (previously DNA and Company, Inc.) to prepare this Community Health Needs Assessment. UCLA Health System hospitals have worked with Ms. Alpers since 2001 to conduct a triennial community needs assessment, in compliance with California Senate Bill 697, community benefits legislation. Following the enactment of Senate Bill 697 in 1994, Ms. Alpers was endorsed by the Healthcare Association of Southern California (HASC) to assist its member hospitals in the design and completion of service area specific community needs assessments. In the six cycles of needs assessments that began in 1995, Ms. Alpers has completed over sixty hospital needs assessments, in addition to assessments conducted for health care organizations and clinics.

## **Section 3: Service Area Definition and Demographics**

This section includes:

---

- Definition of UCLA Health System Service Area
- Description of how the service area was determined
- Demographics of UCLA Health System Service Area, including population, household and family characteristics
- Description of the homeless population in SPA 5
- Comparison of the UCLA Health System Service Area demographics to Los Angeles County

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix A: Service Area Description
- Appendix B: Age Group Detail

## Definition of Service Area for Purposes of the Needs Assessment

For purposes of the 2013 Community Health Needs Assessment, UCLA Health System defined its service area to include the following ZIP codes.

### Service Area Definition

UCLA Health System Service Area  
2013

ZIP Code	Community
90210	Beverly Hills
90211	Beverly Hills
90212	Beverly Hills
90077	Bel Air
90230	Culver City
90232	Culver City
90056	Culver City/Ladera
90045	Westchester
90049	Brentwood
90024	Westwood
90067	Century City
90066	Mar Vista
90034	Palms
90025	West LA
90035	West LA
90064	West LA
90263	Malibu
90265	Malibu
90272	Pacific Palisades
90401	Santa Monica
90402	Santa Monica
90403	Santa Monica
90404	Santa Monica
90405	Santa Monica
90291	Venice
90292	Marina del Rey
90293	Playa del Rey
90094	Playa Vista

Santa Monica UCLA Medical Center and Orthopaedic Hospital is located in Santa Monica ZIP Code 90404.

## **Determination of Service Area for Purposes of the Needs Assessment**

UCLA Health System management determined that the optimal service area to employ for all three of its hospitals — Ronald Reagan UCLA Medical Center, Santa Monica UCLA Medical Center and Orthopaedic Hospital, and Resnick Neuropsychiatric Hospital at UCLA — is the Los Angeles County Department of Health Service Planning Area (SPA) 5, essentially west Los Angeles area. SPA 5 serves the communities of Beverly Hills/Bel Air, Culver City, Brentwood, Westwood, Malibu, Pacific Palisades, Santa Monica, Playa del Rey, Venice, and others. The reasons to use SPA 5-West are multi-fold:

- UCLA could have a greater impact on the community health needs of local, proximal residents versus a broader geography
- UCLA would not be redundant in addressing community health needs with other area hospitals and health systems, which might be more likely to occur in a broader geographic area with more acute care providers
- Los Angeles County Department of Public Health and the California Health Interview Survey (conducted by UCLA Center for Health Policy Research) provide health assessment data for SPA 5 that serve as another information resource in identifying needs and assessing improvement

# Population

**What's Being Measured** The service area population for estimated 2013 and projected 2018.

**How the Measure is Defined** The number of persons living in the service area. The change in number of persons is calculated by subtracting the estimated 2013 population from the projected 2018 population. The change in percent is calculated the dividing the change in number of persons by the 2013 population.

## **Service Area Experience**

### **Population**

UCLA Health System Service Area  
2013 and 2018

Year	Population
2013	656,728
2018	680,116
Change - Number	23,388
Change - Percent	3.6%

## Age Distribution

**What's Being Measured** Persons according to various age cohorts.

**How the Measure is Defined** Persons are reported for the following 11 age groups: (1) 0 to 4 years, (2) 5 to 14 years, (3) 15 to 20 years, (4) 21 to 24 years, (5) 25 to 34 years, (6) 35 to 44 years, (7) 45 to 54 years, (8) 55 to 64 years, (9) 65 to 74 years, (10) 75 to 84 years, and (11) 85 years and older. The sum of these age groups is the estimated 2013 population of the service area.

### **Service Area Experience**

**Age Group Distribution**  
UCLA Health System Service Area  
2013

Age Group	Number of Persons	Percent of Total Population
0 to 4 Years	30,621	4.7%
5 to 14 Years	57,332	8.7%
15 to 20 Years	47,232	7.2%
21 to 24 Years	39,357	6.0%
25 to 34 Years	114,955	17.5%
35 to 44 Years	99,064	15.1%
45 to 54 Years	90,410	13.8%
55 to 64 Years	79,875	12.2%
65 to 74 Years	52,448	8.0%

# Race/Ethnicity

**What's Being Measured** Race/ethnicity for the population.

**How the Measure is Defined** There are no universally accepted definitions for race and Hispanic ethnicity. The Census currently defines “Hispanic or Latino” as an ethnicity, not a race. In the race question for Census 2010, the option of marking one or more race categories was given. People who marked only one race are referred to as the race alone population. Those who marked more than one race are referred to as the two or more races population. All respondents who marked more than one race are collapsed into this category. The question on Hispanic origin asked respondents if they are Spanish, Hispanic or Latino.

The following seven race/ethnicity groupings are used: (1) White is non-Hispanic White and includes persons having origins in any of the original peoples of Europe, the Middle East, or North Africa. It includes people who indicate their race as “White” or report entries such as Irish, German, Italian, Lebanese, Near Easterner, Arab or Polish. (2) Black is non-Hispanic Black and includes persons having origins in any of the Black racial groups of Africa. It includes people who indicate their race as “Black or African American” or provide written entries such as African American, Kenyan, Nigerian or Haitian. (3) Asian is non-Hispanic Asian and includes persons having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent, including, for example, Cambodia, China, India, Japan, Korea, Vietnam, Malaysia, Pakistan, the Philippine Islands, and Thailand. It includes people who provide written entries such as Asian Indian, Chinese, Filipino, Korean, Japanese, Vietnamese, and other Asian. Native Hawaiian/Pacific Islander is non-Hispanic Native Hawaiian/Pacific Islander and includes persons having origins in Hawaii, Guam, Samoa, or other Pacific Islands. (4) Hispanic is Hispanic or Latino and includes the total of all those who identified themselves as Hispanic or Latino. (5) American Indian and Alaskan Native is non-Hispanic American Indian and Alaskan Native and includes persons having origins in any of the original peoples of North and South America (including Central America) and who maintain tribal affiliation or community attachment. (6) Some Other Race is non-Hispanic some other race and includes all other responses not included in the categories above. (7) Two or More Races is non-Hispanic two or more races.

The sum of these seven race/Hispanic ethnicity categories is the 2013 total population.

## Service Area Experience

## Language Spoken at Home for Persons 5 Years and Older

**What's Being Measured** The language spoken at home by persons five years and older.

**How the Measure is Defined** Languages spoken at home are grouped into the five following categories: (1) speak only English at home, (2) speak Spanish at home, (3) speak an Asian/Pacific Island language at home, (4) speak an European language at home, and (5) speak other language at home. The sum of these five groupings for language spoken at home by persons five years and older is the 2013 population age 5 years and older.

### Service Area Experience

#### **Language Spoken at Home**

UCLA Health System Service Area

## Educational Attainment for Persons 25 Years and Older

**What's Being Measured** Highest level of education completed by persons 25 years and older.

**How the Measure is Defined** Highest level of education completed for persons age 25 years and older is reported for the following seven categories: (1) less than 9<sup>th</sup> grade, (2) some high school, no diploma; (3) high school graduate or its equivalent, (4) some college, no degree; (5) Associate Degree, (6) Bachelor Degree, and (7) Graduate or Professional School Degree (some examples of professional degrees include medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law and theology). The sum of these seven groupings for educational attainment of persons 25 years and older equals the 2013 population age 25 years and older.

### Service Area Experience

#### **Educational Attainment of Persons 25 Years and Older**

UCLA Health System Service Area

2013

Highest Level of Education Completed	Number of Persons 25+ Years	Percent of Persons 25+ Years

## Employment Status for Persons 16 Years and Older

**What's Being Measured** Employment status for persons age 16 years and older.

**How the Measure is Defined** Employment status is grouped into the following four categories: (1) persons in the armed forces serving active duty with the United States Army, Air Force, Navy, Marine Corps or Coast Guard, (2) persons in the labor force and employed, (3) persons in the labor force and unemployed (e.g., not at work and were looking for work and available to accept a job), and (4) persons who are not classified as members of the labor force (consists mainly of students, housewives, retired workers, seasonal workers enumerated in an off season who were not looking for work, institutionalized persons, and persons doing only incidental unpaid family work). The sum of these four groupings for employment status is the 2013 population age 16 years and older.

## Occupation Type for Employed Labor Force

**What's Being Measured** Occupation classification of employed labor force.

**How the Measure is Defined** Occupations are grouped into the following three types: (1) blue collar (includes occupations of construction and transportation/material moving), (2) white collar (includes occupations of management/business/financial operations, professional and related occupations, sales and office), and (3) service and farming. The sum of these three categories is 2013 employed labor force.

# Households

**What's Being Measured** Households in the service area for estimated 2013 and projected 2018.

**How the Measure is Defined** A household is considered a housing unit, occupied by either a single person or two or more related or unrelated persons. Units occupied by ten or more unrelated individuals are called group quarters, not households. The change in number of households is calculated by subtracting the estimated 2013 households from the projected 2018 households. The change in percent is calculated the dividing the change in number of households by the 2013 households.

## **Service Area Experience**

## Group Quarters Population by Type

**What's Being Measured** The population living in group quarters.

**How the Measure is Defined** Group quarters is a type of residence inhabited by ten or more persons, unrelated to the householder and includes the following six types: (1) correctional institutions, (2) nursing homes, (3) other institutions, (4) college dormitories, (5) military quarters, and (6) other non-institutional group quarters. The sum of these group quarters types is the 2013 population living in group quarters.

## Persons Per Household and Average Household Size

**What's Being Measured** Person per household and average household size.

**How the Measure is Defined** The number of households is reported for following seven categories: 1-person households, 2-person households, 3-person households, 4-person households, 5-person households, 6-person households, and 7 or more person households. The sum of these various person household categories is the 2013 total households. Average household size is calculated by dividing the total population living in households by the total number of households.

## Households by Presence of Children Under 18 Years of Age

**What's Being Measured** Households are described by the presence of one or more persons under 18 years of age (children) living in the household.

**How the Measure is Defined** Households with children living in the household may include married couple families, families with male householders (no wives), families with female householders (no husbands), and non-family households. The sum of these two household descriptions is the 2013 total households.

### Service Area Experience

# Households by Income Group and Average Household Income

**What's Being Measured** Households in various income groupings.

**How the Measure is Defined** Household income includes the total money received in the stated calendar year by all household members 15 years and older. The income is presented in terms of current dollars for 2013. The number of households with an annual household income is reported for the following seven income groups: (1) under \$15,000 (2) \$15,000 to \$34,999 (3) \$35,000 to \$74,999 (4) \$75,000 to \$99,999 (5) \$100,000 to \$149,999 (6) \$150,000 to \$199,999, and (7) \$200,000 and over. The sum of households with these seven income groupings is the total 2013 households. Average household income is calculated the dividing the total income of an area by the number of households in the area.

## Households by Age of Head of Household

**What's Being Measured** The number of households by age group of the head of household.

**How the Measure is Defined** The head of households is reported for the following three age groups: (1) 15 to 24 years, (2) 25 to 64 years, and (3) 65 years and older. The sum of the households headed by persons in these age groups is the total 2013 households.

### Service Area Experience

## Owner Occupied and Renter Occupied Housing Units

**What's Being Measured** Owner occupied housing units and renter occupied housing units for estimated 2013.

**How the Measure is Defined** A housing unit is owner occupied if the owner or co-owner lives in the unit. All occupied housing units that are not owner occupied, whether they are rented for cash rent or occupied without payment of cash rent, are classified as renter occupied (units may be provided free of rent by friends or relatives in exchange for services, such as resident manager, caretaker, or tenant farmer). Housing units on military bases are also classified in the "no cash rent" category. The sum of owner occupied housing units and renter occupied housing units is the total occupied housing units.

### Service Area Experience

# Families

**What's Being Measured** The number of families (family households) for estimated 2013 and projected 2018.

**How the Measure is Defined** A family household consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage or adoption. All persons who are related to the householder are regarded as members of his or her family. The change in number of families is calculated by subtracting the estimated 2013 families from the projected 2018 families. The change in percent is calculated the dividing the change in number of families by the 2013 families.

## **Service Area Experience**

## Families by Poverty Status

**What's Being Measured** Families below the poverty level and at or above the poverty level.

**How the Measure is Defined** The Census Bureau uses the federal government's official poverty definition. Families are reported as either (1) below the federal poverty level or (2) at/above the federal poverty level. The sum of these two groupings is the 2013 families.

### Service Area Experience

# Homeless Population

**What's Being Measured** Count of homeless population.

**How the Measure is Defined** To accurately enumerate the homeless population in Los Angeles County, a point-in-time census was conducted over three nights from January 25 to January 27, 2011, with the support of 4,000 volunteers. In this study, the U.S. Department of Housing and Urban Development's definition of homelessness was used. The definition is an individual who lacks a fixed, regular and adequate nighttime residence and an individual who has a primary nighttime residence that is a supervised publicly or privately operated shelter designed to provide temporary living accommodations or an institution that provides a temporary residence for individuals intended to be institutionalized or a public or private place not designated for, or ordinarily used as, a regular sleeping accommodation for human beings.

## Section 4: Health Access and Utilization

This section includes:

---

- Identification of Health Professional Shortages Areas for primary care and mental health
- Findings from the 2009 California Health Interview Survey for SPA 5 benchmarked to Healthy People 2020 targets
- Comparison of health access indicators to Los Angeles County and California

Key used to summarize SPA 5 experiences benchmarked to Healthy People 2020 Targets:

---

Target Met

Target Not Met

# Health Professional Shortage Areas

**What's Being Measured** Two different designations are presented here – primary care and mental health professional shortage areas. The federal Health Professional Shortage Area (HPSA) identifies areas having a shortage of health care providers.

**How the Measure is Defined** Primary care HPSA is decided on the basis of availability of primary care physicians. Mental health HPSA is decided on the basis of availability of psychiatrist and mental health professionals. Criteria is based on practitioner ratios and the presence of barriers to access such as travel distance. These designations are established by Medical Service Study Areas (MSSA), geographical areas based upon U.S. Census tracts; MSSAs are reassessed every decade following the U.S. Census.

## Service Area Experience

### Health Professional Shortage Areas: Primary Care and Mental Health

Medical Service Study Areas in Service Area

2012

Medical Service Study Area (MSSA)	Health Professional Shortage Area

# Medical Insurance

**What's Being Measured** Persons under age 65 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health insurance includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Health insurance coverage is a key component of access to health care. Studies show that people with health insurance coverage report fewer access problems than those who are uninsured.

**Healthy People 2020 Objective** Increase the proportion of persons under age 65 years with medical insurance to 100%.

## **Service Area Experience**

**Measurement Period** 2009

90.0% of persons age 0 to 65 years with medical insurance

**Source of Data** UCLA Center for Health Policy Research

# Source of Ongoing Care

**What's Being Measured** Persons of all ages with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons of all ages who have a specific source of ongoing care to 95.0%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

## **Service Area Experience**

**Measurement Period** 2009

91.9% have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Medical Care

**What's Being Measured** Persons of all ages who reported delays in getting needed medical care.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medical care (doctor, specialist or other health provider). Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Utilizing appropriate clinical and preventive services in a timely fashion can have important implications on the progression and treatment of many diseases. Individuals who receive services in a timely manner have greater opportunity to prevent disease or detect disease during earlier, treatable stages. A delay of necessary care can lead to an increased risk of complications.

**Healthy People 2020 Objective** Reduce the proportion of persons who are unable to obtain or delay in obtaining necessary medical care to 4.2%

## **Service Area Experience**

**Measurement Period** 2009

15.4% experienced delays in getting needed medical care

**Source of Data** UCLA Center for Health Policy Research

# Delays in Getting Prescription Medications

**What's Being Measured** The proportion of persons who reported delays or didn't get prescription medicines.

**How the Measure is Defined** Respondents were asked if they experienced any delays or did not get needed medicines that a doctor prescribed. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Utilizing appropriate clinical and preventive services in a timely fashion can have important implications on the progression and treatment of many diseases.

**Healthy People 2020 Objective** Reduce the proportion of all persons of who are unable to obtain or delay in obtaining necessary prescription medicines to 2.8%

## **Service Area Experience**

**Measurement Period** 2009

8.9% experienced delays in getting prescription medications

**Source of Data** UCLA Center for Health Policy Research

# Mammogram In Past Two Years

**What's Being Measured** Females age 50 to 74 years who had a mammogram in the past two years.

**How the Measure is Defined** Females were asked “Have you ever had a mammogram?” and if yes, asked “How long ago did you have your most recent mammogram?” Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Healthy People 2020 uses the U.S. Preventative Services Task Force (USPSTF) guidelines to measure this objective and the current USPSTF recommendation includes biennial mammography for women aged 50 to 74 years, with an additional recommendation that starting biennial mammography before age 50 should be an individual decision considering patient context, including a patient's beliefs regarding possible benefits and harms. Although mammograms do not detect all cases of breast cancer, mammograms have been shown to increase early detection, thus reducing mortality.

**Healthy People 2020 Objective** Increase the proportion of women age 50 to 74 years who received a mammogram in the past two years to 81.1%.

## **Service Area Experience**

**Measurement Period** 2009

88.9% of females age 50 to 74 years had a mammogram in past two years

**Source of Data** UCLA Center for Health Policy Research

# Had Colon Cancer Screening Tests

**What's Being Measured** Adults age 50 to 75 years who ever had a sigmoidoscopy, colonoscopy or fecal occult blood test (FOBT).

**How the Measure is Defined** Adults over 50 years of age were asked "Have you ever had a sigmoidoscopy, colonoscopy or fecal occult blood test (FOBT)?" Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Colon cancer is one of the most commonly diagnosed cancers in the United States. Colorectal cancer is the second leading cancer killer, but it doesn't have to be. As many as sixty percent of colorectal cancer deaths could be prevented if adults 50 or older had regular screening tests.

**Healthy People 2020 Objective** Increase the proportion of adults age 50 years to 75 years who receive a colon cancer screening based on the most recent guidelines to 70.5%. These guidelines for persons 50 to 75 years include a blood stool test in the past year, sigmoidoscopy in the past five years and blood stool test in the past three years, or a colonoscopy in the past ten years.

## **Service Area Experience**

**Measurement Period** 2009

72.3% of adults age 50 to 75 years had recommended colon cancer screening tests

**Source of Data** UCLA Center for Health Policy Research

### Summary of Health Access and Utilization Indicators

SPA 5 Compared to Los Angeles County, California and Healthy People 2020 Targets

2009

Indicator	SPA 5		County Rate	California Rate	Target Rate
	Rate	Status			
Health Access					
Insured All or Part of Year Age 0 to 64 Years	90.0%	-	86.1%	87.8%	100%
Usual Source of Ongoing Care All Ages	91.9%	-	83.8%	85.8%	95.0%
Delays in Getting Medical Care All Ages	15.4%	-	11.6%	12.5%	4.2%
Delays in Getting Medicines All Ages	8.9%	-	7.5%	8.2%	2.8%
Cancer Screening					
Mammogram in Past 2 Years Females Age 50 to 74 Years	88.9%	+	87.1%	86.3%	81.1%
Colorectal Cancer Screening Age 50 to 75 Years	72.3%	+	65.3%	67.2%	70.5%

Notes:

Target rate is Healthy People 2020 objective

## Section 5: Mortality

This section includes:

---

- Summary of premature mortality in Los Angeles County and SPA 5
- Profile of deaths in UCLA Health System Service Area
- Age-adjusted death rates in UCLA Health System Service Area benchmarked to Healthy People 2020 targets
- Comparison of UCLA Health System age-adjusted death rates to Los Angeles County and California

Key used to summarize UCLA Health System Service Area experiences benchmarked to Healthy People 2020 targets:

---

	Target Met
	Target Not Met
	Result is Statistically Unstable
	No Target Established

Detailed information – for each leading cause of death – can be found in:

---

- Appendix C: Deaths by Age Group

## Premature Mortality in Los Angeles County

Years of potential life lost before age 75 years (YPLL-75) is one of the commonly used public health measures to reflect the impact of premature mortality. In 2009, the top three leading causes of premature death in Los Angeles County were coronary heart disease, homicide, and motor vehicle crashes. The ranking, and years of potential life lost before age 75 (YPLL-75) due to selected leading causes of death in Los Angeles County are summarized in the table on the next page.

### Years of Potential Life Lost for Leading Causes of Premature Death, Ranked

Los Angeles County

2009

Rank	Cause of Death	Years of Potential Life Lost Before Age 75	
		Number	Percent
1	Coronary Heart Disease	59,440	13.0%
2	Homicide	31,270	6.9%
3	Motor Vehicle Crash	22,017	4.8%
4	Liver Disease	21,515	4.7%
5	Suicide	20,835	4.6%
6	Drug Overdose	20,484	4.5%
7	Lung Cancer	17,295	3.8%
8	Stroke	15,554	3.4%
9	Diabetes	14,697	3.2%
10	Breast Cancer	13,466	3.0%
—	All Other Causes	218,940	48.1%
—	<b>Total</b>	<b>455,513</b>	<b>100.0%</b>

Source: Los Angeles County Department of Public Health

## Premature Mortality in SPA 5

In 2009, the top three leading causes of premature death in SPA 5 –West were coronary heart disease, suicide and drug overdose. The ranking, and years of potential life lost before age 75 (YPLL) due to selected leading causes of death are summarized in the table on the next page.

### Top Five Leading Causes of Premature Death, Ranked by YPLL

Service Planning Area 5 (West)

2009

Rank	Cause of Death	Years of Potential Life Lost Before Age 75	
		Number	Percent
1	Coronary Heart Disease	2,664	13.0%
2	Suicide	1,703	8.3%
3	Drug Overdose	1,237	6.1%
4	Liver Disease	1,078	5.3%
5	Breast Cancer	1,072	5.2%
—	All Other	12,672	62.0%
—	<b>Total</b>	<b>20,426</b>	<b>100.0%</b>

Source: Los Angeles County Department of Public Health

## Profile of Deaths

On average, there were 4,039 deaths a year in the service area. Heart disease and cancer were the two leading causes of death in the service area, accounting for 53.5 percent of all deaths. Other leading causes of death in the service area are summarized in the table below.

### Profile of Deaths, Ranked

UCLA Health System Service Area

Three-Year Average (2008 to 2010)

Cause of Death	Number	Percent
Diseases of the heart	1,107	27.4%
Coronary heart disease	868	21.5%
Cancer (All Sites)	1,054	26.1%
Lung cancer	219	5.4%
Colorectal cancer	98	2.4%
Breast cancer	94	2.3%
Prostate cancer	62	1.5%
Stroke	249	6.2%
Alzheimer's disease	210	5.2%
Chronic Obstructive Pulmonary Diseases	184	4.6%
Pneumonia/Influenza	182	4.5%
Unintentional Injuries (All Types)	121	3.0%
Motor Vehicle Crashes	32	0.8%
Diabetes	92	2.3%
Suicide	72	1.8%
Cirrhosis	46	1.1%
Homicide	15	0.4%
HIV Infection	11	0.3%
Unknown	20	0.5%
All Other	676	16.7%
<b>All Causes</b>	<b>4,039</b>	<b>100.0%</b>

*Note: Number of deaths rounded*

# Coronary Heart Disease

**What's Being Measured** The age-adjusted death rate due to coronary heart disease.

**How the Measure is Defined** Coronary heart disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I11 and I20-I25. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce coronary heart disease deaths to 100.8 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

98.7 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Stroke

**What's Being Measured** The age-adjusted death rate due to stroke.

**How the Measure is Defined** Stroke is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes I60-I69. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce stroke deaths to 33.8 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

28.5 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Cancer (All Sites)

**What's Being Measured** The age-adjusted death rate due to cancer (all sites).

**How the Measure is Defined** Cancer (all sites) is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C00-C97. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce cancer deaths to 160.6 deaths per 100,000 population.

### **Service Area Experience**

**Measurement Period** 2008 – 2010

128.8 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Lung Cancer

**What's Being Measured** The age-adjusted death rate due to lung cancer.

**How the Measure is Defined** Lung cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C33-C34. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce lung cancer deaths to 45.5 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

27.0 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Colorectal Cancer

**What's Being Measured** The age-adjusted death rate due to colorectal cancer.

**How the Measure is Defined** Colorectal cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes C18-C21. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce colorectal cancer deaths to 14.5 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

11.9 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Prostate Cancer

**What's Being Measured** The age-adjusted death rate due to prostate cancer.

**How the Measure is Defined** Prostate cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C61. The rate is per 100,000 males and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce prostate cancer deaths to 21.2 deaths per 100,000 males.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

18.2 deaths per 100,000 males

**Source of Data** California Department of Public Health

# Female Breast Cancer

**What's Being Measured** The age-adjusted death rate due to breast cancer in females.

**How the Measure is Defined** Breast cancer is defined as International Classification of Diseases, Tenth Revision (ICD-10) code C50. The rate is per 100,000 females and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce breast cancer deaths to 20.6 deaths per 100,000 females.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

20.7 deaths per 100,000 females (Note: Rate is 0.1 higher than target)

**Source of Data** California Department of Public Health

# Chronic Obstructive Pulmonary Diseases

**What's Being Measured** The age-adjusted death rate due to chronic obstructive pulmonary diseases. Chronic obstructive pulmonary diseases are a group of diseases that cause airflow blockage and breathing-related problems and include emphysema and chronic bronchitis.

**How the Measure is Defined** Chronic obstructive pulmonary diseases are defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J40-J44, and excludes asthma. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce chronic obstructive pulmonary disease deaths to 98.5 deaths per 100,000 population age 45 years and older.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

58.5 deaths per 100,000 population age 45 years and older

**Source of Data** California Department of Public Health

# Influenza/Pneumonia

**What's Being Measured** The age-adjusted death rate due to influenza/pneumonia.

**How the Measure is Defined** Influenza/Pneumonia is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes J09-J18. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** None established.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

 20.4 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Diabetes-Related

**What's Being Measured** The age-adjusted death rate due to diabetes (as both an underlying cause of death and a contributing cause of death).

**How the Measure is Defined** Diabetes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes E10-E14, as either an underlying or contributing cause of death. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce the diabetes-related death rate to 65.8 per 100,000 population (includes those with diabetes listed as either an underlying or a contributing cause of death).

### **Service Area Experience**

**Measurement Period** 2008 – 2010

43.8 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Unintentional Injuries (All Types)

**What's Being Measured** The age-adjusted death rate due to all unintentional injuries.

**How the Measure is Defined** Unintentional injuries is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V01-X59 and Y85-Y86. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce unintentional injury deaths to 36.0 deaths per 100,000 population.

### **Service Area Experience**

**Measurement Period** 2008 – 2010

16.2 deaths per 100,000 population

**Source of Data** California Department of Public Health

## Motor Vehicle Crashes (Traffic-Related)

**What's Being Measured** The age-adjusted death rate due to motor vehicle crashes (traffic related).

**How the Measure is Defined** Motor vehicle crashes is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes V02-V04 (.1, .9), V09.2, V12-V14 (.3-.9), V19 (.4-.6), V20-V28 (.3-.9), V29-V79 (.4-.9), V80 (.3-.5), V81.1, V82.1, V83-V86 (.0-.3), V87 (.0-.8), and V89.2. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce deaths due to motor vehicle crashes to 12.4 deaths per 100,000 population.

### **Service Area Experience**

**Measurement Period** 2008 – 2010

4.5 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Homicide

**What's Being Measured** The age-adjusted death rate due to homicide.

**How the Measure is Defined** Homicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U01-U02, X85-Y09 and Y87.1. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce homicide deaths to 5.5 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

2.3 deaths per 100,000 population (fewer than 20 deaths)

**Source of Data** California Department of Public Health

# Alzheimer's Disease

**What's Being Measured** The age-adjusted death rate due to Alzheimer's disease.

**How the Measure is Defined** Alzheimer's disease is defined as International Classification of Diseases, Tenth Revision (ICD-10) code G30. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** None established.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

○	22.6 deaths per 100,000 population
---	------------------------------------

**Source of Data** California Department of Public Health

# Suicide

**What's Being Measured** The age-adjusted death rate due to suicide.

**How the Measure is Defined** Suicide is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes U03, X60-X84 and Y87.0. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce suicide deaths to 10.2 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

9.6 deaths per 100,000 population

**Source of Data** California Department of Public Health

# Cirrhosis

**What's Being Measured** The age-adjusted death rate due to cirrhosis.

**How the Measure is Defined** Cirrhosis is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes K70, K73, and K74. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce cirrhosis deaths to 8.2 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

5.7 deaths per 100,000 population

**Source of Data** California Department of Public Health

# HIV Infection

**What's Being Measured** The age-adjusted death rate due to HIV/AIDS.

**How the Measure is Defined** HIV infection is defined as International Classification of Diseases, Tenth Revision (ICD-10) codes B20, B21, B22, B23 and B24. The rate is per 100,000 persons and is standardized to the 2000 United States Standard Million population.

**Healthy People 2020 Objective** Reduce HIV infection to 3.3 deaths per 100,000 population.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

1.4 deaths per 100,000 population (fewer than 20 deaths)

**Source of Data** California Department of Public Health

### Summary of Age-Adjusted Death Rates by Cause of Death

UCLA Health System Service Area Compared to Los Angeles County, California and Healthy People 2020 Targets

Three-Year Average (2008 to 2010)

Indicator	Service Area		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Health Status</b>					
Coronary Heart Disease	98.7	+	132.8	121.6	100.8
Stroke	28.5	+	34.2	37.4	33.8
Cancer (All Sites)	128.8	+	141.5	151.7	160.6
Lung	27.0	+	30.9	36.1	45.5
Colorectal	11.9	+	13.8	14.1	14.5
Prostate	18.2	+	20.3	21.2	21.2
Female Breast	20.7	+	20.2	20.7	20.6
Chronic Pulmonary Diseases	58.5	+	84.2	n/a	98.5
Influenza/Pneumonia	20.4	○	21.7	17.2	None
Diabetes-Related	43.8	+	75.1	87.7	65.8
Unintentional Injuries (All Types)	16.2	+	19.8	27.1	36.0
Motor Vehicle Accidents	4.5	+	6.5	7.9	12.4
Homicide	2.3	*	6.9	2.8	5.5
Alzheimer's disease	22.6	○	22.4	28.2	None
Suicide	9.6	+	7.6	9.7	10.2
Cirrhosis	5.7	+	11.3	10.8	8.2
HIV Infection	1.4	*	3.0	3.7	3.3

Notes:

Target rate is Healthy People 2020 objective

Rates are per 100,000 persons and are standardized to the 2000 U.S. Standard Million population

Chronic pulmonary diseases death rate is for the population age 45 years and older

California rate for diabetes-related deaths are from 2005

Source: California Department of Public Health

## Section 6: Maternal and Infant Health

This section includes:

---

- Demographic overview of females age 15 to 44 years in UCLA Health System Service Area
- Summary of births in UCLA Health System Service Area
- Birth outcomes in UCLA Health System benchmarked to Healthy People 2020 targets
- Comparison of UCLA Health System Service Area birth outcomes to Los Angeles County and California

Key used to summarize UCLA Health System Service Area experiences benchmarked to Healthy People 2020 Targets:

---

Target Met

Target Not Met

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix D: Maternal and Infant Health

## Females Age 15 to 44 Years

**What's Being Measured** Females 15 to 44 years of age (child bearing age).

**How the Measure is Defined** The percentage of women age 15 to 44 years is calculated by dividing this age group of females by the total population (includes males).

### **Service Area Experience**

#### **Females Age 15 to 44 Years**

UCLA Health System Service Area

2013

<b>Female Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
15 to 20 Years	24,261	3.7%
21 to 24 Years	20,449	3.1%
25 to 34 Years	57,979	8.8%
35 to 44 Years	49,827	7.6%
<b>Total Women 15 to 44 Years</b>	<b>152,516</b>	<b>23.2%</b>
Total Population	656,728	—

*Note: Percentages rounded*

*Source: Nielsen Claritas*

## Number of Births

**What's Being Measured** The number of live births.

**How the Measure is Defined** The three-year average is calculated by dividing the sum of the annual births by three.

### **Service Area Experience**

#### **Number of Live Births**

UCLA Health System Service Area

*Three-Year Average (2009 to 2011)*

Year	Number of Births
2009	6,908
2010	6,936
2011	6,725
<b>Three-Year Average</b>	<b>6,856</b>

*Source: California Department of Public Health*

### **Comparison to Los Angeles County**

#### **Number of Live Births**

Los Angeles County

*Three-Year Average (2009 to 2011)*

Year	Number of Births
2009	139,679
2010	133,160
2011	130,312
<b>Three-Year Average</b>	<b>134,384</b>

*Source: California Department of Public Health*

## **Births by Race/Ethnicity**

**What's Being Measured** Live births by mother's race/ethnicity.

**How the Measure is Defined** Births by mother's race/ethnicity is reported for the following six categories: White, Black, Asian/Pacific Islander, Hispanic, Native American/Alaskan and other/unknown. The sum of these six race/ethnicity categories is the total number of births.

### **Service Area Experience**

#### **Births by Mother's Race/Ethnicity**

UCLA Health System Service Area

*Three-Year Average (2009 to 2011)*

<b>Mother's Race/Ethnicity</b>	<b>Number of Births</b>	<b>Percent of Total Births</b>
White	3,665	53.4%
Black	344	5.0%
Asian or Pacific Islander	1,108	16.2%

## Comparison to Los Angeles County

### **Births by Mother's Race/Ethnicity**

Los Angeles County

*Three-Year Average (2009 to 2011)*

<b>Mother's Race/Ethnicity</b>	<b>Number of Births</b>	<b>Percent of Total Births</b>
White	24,251	18.0%
Black	10,210	7.6%
Asian or Pacific Islander	15,956	11.9%
Hispanic	82,002	61.0%
Native American or Alaskan	188	0.1%
Other and Unknown	1,777	1.3%
<b>Total Births</b>	<b>134,384</b>	<b>100.0%</b>

*Source: California Department of Public Health*

## **Births by Mother's Age Group**

**What's Being Measured** Live births by mother's age group.

**How the Measure is Defined** Births by mother's age group is reported for the following five categories: (1) less than 20 years, (2) 20 to 29 years, (3) 30 to 34 years of age, (4) 35 years and over, and (5) unknown age. The sum of these five age group categories is the total number of births.

### **Service Area Experience**

#### **Births by Mother's Age Group**

UCLA Health System Service Area

*Three-Year Average (2009 to 2011)*

<b>Mother's Age Group</b>	<b>Number of Births</b>	<b>Percent of Total Births</b>
Less than 20 Years	117	1.7%
20 to 29 Years	1,634	23.8%

Unknown	11	0.0%
<b>Total Births</b>	<b>134,384</b>	<b>100.0%</b>

*Source: California Department of Public Health*

## **Births with Early Entry into Prenatal Care**

**What's Being Measured** The rate of live births to mothers with early prenatal care during pregnancy.

**How the Measure is Defined** Early prenatal care is defined as the percentage of mothers who begin prenatal care in the first trimester. The rate is expressed per 100 live births and excludes births with unknown prenatal care.

**Why the Measurement is Helpful** Prenatal care includes three major components: risk assessment, treatment for medical conditions or risk reduction, and education. Each component can contribute to reductions in perinatal illness, disability, and death by identifying and mitigating potential risk and helping women to address behavioral factors – such as smoking and alcohol and drug use – that contribute to poor outcomes. Prenatal care is more likely to be effective if women begin receiving care early in pregnancy.

**Healthy People 2020 Objective** Increase the proportion of pregnant women who receive prenatal care beginning in the first trimester to 77.9% of live births.

### **Service Area Experience**

**Measurement Period** 2009 – 2011

93.7% of births were to mothers with prenatal care beginning in the first trimester

**Source of Data** California Department of Public Health

# Infant Birth Weight

**What's Being Measured** The rate of very low and low birth weight infants.

**How the Measure is Defined** Very low birth weight is defined as live births weighing less than 1,500 grams (3.25 pounds). Low birth weight is defined as live births weighing less than 2,500 grams (5.5 pounds). Normal birth weight is defined as 2,500 grams or more. The rates are expressed per 100 live births and exclude births with unknown birth weight.

**Why the Measurement is Helpful** Low birth weight is associated with long-term disabilities, such as cerebral palsy, autism, mental retardation, vision and hearing impairments and other developmental disabilities and is the risk factor most closely associated with neonatal death. Smoking accounts for 20 to 30 percent of all low birth weight infants in the United States. The effect of smoking on low birth weight rates appears to be attributable to intrauterine growth retardation rather than to preterm delivery. Despite the low proportion of pregnancies resulting in low birth weight infants, expenditures for the care of low birth weight infants total more than half of the costs incurred for all newborns.

**Healthy People 2020 Objectives** Reduce very low birth weight infants to 1.4% and reduce low birth weight infants to 7.8%.

## **Service Area Experience**

**Measurement Period** 2009 – 2011

1.1% of infants were very low birth weight

7.2% of infants were low birth weight

**Source of Data** California Department of Public Health

# Infant Mortality

**What's Being Measured** The rate of infant deaths.

**How the Measure is Defined** Infant mortality is the number of deaths among infants under one year of age. The rate is expressed per 1,000 live births.

**Why the Measurement is Helpful** The infant mortality rate is made up to two components: neonatal mortality (death in the first 28 days of life) and postneonatal mortality (death from the infants' 29<sup>th</sup> days but within the first year). The leading causes of neonatal death include birth defects, disorders related to short gestation and low birth weight, and pregnancy complications. Postneonatal death reflects events experienced in infancy, including SIDS, birth defects, injuries and homicide.

**Healthy People 2020 Objective** Reduce the rate of all infant deaths to no more than 6.0 per 1,000 live births.

## **Service Area Experience**

**Measurement Period** 2008 – 2010

3.6 infant deaths per 1,000 live births

**Source of Data** California Department of Public Health

### Summary of Maternal and Infant Health Indicators

UCLA Health System Service Area Compared to Los Angeles County, California and Healthy People 2020 Targets

Three-Year Average (2009 to 2011)

Indicator	Service Area		County Rate	California Rate	Target Rate
	Rate	Status			
<b>Pregnancy/Birth Outcome</b>					
Early Prenatal Care	93.7%	+	85.9%	83.3%	77.9%
Low Birth Weight Infants	7.4%	+	7.2%	6.8%	7.8%
Very Low Birth Weight Infants	1.1%	+	3.7%	1.2%	1.4%
<b>Infant Outcome</b>					
Infant Mortality Rate	3.6	+	5.1	5.0	6.0

Notes:

Target rate is Healthy People 2020 objective

Infant mortality rate is per 1,000 live births

Infant mortality rate is three-year average from 2008 to 2010

Source: California Department of Public Health

## Section 7: Child and Adolescent Health

This section includes:

---

- Demographic overview of children and youth age 0 to 20 years in UCLA Health System Service Area
- Summary of students enrolled in free or reduced fee meals
- Summary of high school dropouts
- Findings from the 2009 California Health Interview Survey for SPA 5 benchmarked to Healthy People 2020 targets
- Findings from the 2011 Los Angeles County Department of Public Health Survey for SPA 5 benchmarked to Healthy People 2020 targets
- Comparison of SPA 5 child and adolescent health indicators to Los Angeles County and California

Key used to summarize SPA 5 experiences benchmarked to Healthy People 2020 Targets:

- Appendix C: Age Group Detail

## Children and Youth Age 0 to 20 Years

**What's Being Measured** Children and youth under age 21 years.

**How the Measure is Defined** The percentage of the population 0 to 20 years is calculated by dividing this age group by the total population.

### **Service Area Experience**

#### **Children and Youth Age 0 to 20 Years**

UCLA Health System Service Area

2013

<b>Age Group</b>	<b>Number of Persons</b>	<b>Percent of Total Population</b>
0 to 4 Years	30,621	4.7%
5 to 14 Years	57,332	8.7%
15 to 20 Years	47,232	7.2%
<b>Total 0 to 20 Years</b>	<b>135,185</b>	<b>20.6%</b>
Total Population	656,728	—

*Note: Percentages rounded*

*Source: Nielsen*

## Students Enrolled in Free or Reduced Price Meals

**What's Being Measured** Students enrolled in the Free or Reduced Price Meal Programs.

**How the Measure is Defined** The Free or Reduced Price Meal Program is a federal program administered by the U.S. Department of Agriculture. Program participation is by application and is based on income of the child's parent or guardian. Students enrolled in the program is defined as a student's family has met eligibility criteria and student is "signed up" to participate. Data is for the 2011/2012 school year and is from the California Department of Education website.

**Why the Measurement is Helpful** Students enrolled in the program provides information regarding the socioeconomic status of families with children attending public schools.

**Healthy People 2020 Objective** None established.

### Service Area Experience

#### **Students Enrolled in Free or Reduced Price Meals**

School Districts in UCLA Health System Service Area

2011/2012 School Year

School District	Free/Reduced Price Meals	
	Number	Percent
Beverly Hills Unified	266	6.0%
Culver City Unified	2,721	40.8%
Los Angeles Unified	489,777	76.7%
Santa Monica-Malibu Unified	3,138	28.1%
<b>Comparison Data</b>		
Los Angeles County	1,017,283	66.6%
California	3,472,481	57.5%

Source: California Department of Education

# High School Dropouts

**What's Being Measured** Dropouts in grade 9 through grade 12 in public schools.

**How the Measure is Defined** The following criteria are used to define a dropout: (1) was enrolled in grades 7, 8, 9, 10, 11 or 12 at some time during the previous school year and left school prior to completing the school year and has not returned to school as of Information Day or (2) did not begin attending the next grade (7, 8, 9, 10, 11, or 12) in the school to which they were assigned or in which they had pre-registered or were expected to attend by Information Day. A 1-year dropout rate (calculated by dividing the grade 9 to 12 dropouts by the grade 9 to 12 enrollment) is used by the National Center for Education Statistics to compare state and school districts. Data is for the 2011/2012 school year and is from the California Department of Education website.

**Why the Measurement is Helpful** High school dropouts are three times as likely to slip into poverty as those who finish high school; they make up nearly half of the heads of households receiving public assistance. Economic prospects for dropouts will be even gloomier as more jobs require advanced skill and technical knowledge. High school dropouts are at risk for other negative outcomes like becoming a teen parent or spending time in prison. The children of dropouts are much less likely to graduate themselves, perpetuating a cycle of diminished opportunities.

**Healthy People 2020 Objective** None established.

## Service Area Experience

### High School Dropouts

School Districts in UCLA Health System Service Area  
2011/2012 School Year

School District	High School Dropouts	
	Number	Percent
Beverly Hills Unified	5	0.2%
Culver City Unified	84	3.5%

Santa Monica-Malibu Unified	68	1.7%
<b>Comparison Data</b>		
Los Angeles County	25,087	4.8%
California	83,469	4.2%

Source: California Department of Education

# Medical Insurance

**What's Being Measured** Persons age 0 to 17 years with medical insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of persons with health care coverage includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Insured persons include those with health insurance for all or part of the year. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Health insurance coverage is a key component of access to health care. Studies show that people with health insurance coverage report fewer access problems than those who are uninsured.

**Healthy People 2020 Objective** Increase the proportion of persons age 0 to 17 years with medical insurance to 100%.

## **Service Area Experience**

**Measurement Period** 2009

94.7% of children age 0 to 17 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

## Source of Ongoing Care

**What's Being Measured** Persons age 0 to 17 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons age 0 to 17 years who have a specific source of ongoing care to 100%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **Service Area Experience**

**Measurement Period** 2009

94.2% of children age 0 to 17 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Obese Adolescents

**What's Being Measured** The proportion of teens age 12 to 17 years who are obese.

**How the Measure is Defined** Overweight or obese adolescents are defined as those who have a Body Mass Index (or BMI) at or above the gender- and age-specific 95<sup>th</sup> percentile of BMI based on the revised CDC Growth Charts for the United States. Results are based on self-reported data by adolescents and are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** In 1999-2000, 15% of children and adolescents were overweight – triple what the proportion was in 1980. Obese children and adolescents are more likely to become obese adults; overweight adults are at increased risk for heart disease, high blood pressure, stroke, diabetes, some types of cancer, and gallbladder disease.

**Healthy People 2020 Objective** Reduce the proportion of adolescents age 12 to 17 years who are obese to 16.1%.

## **Service Area Experience**

**Measurement Period** 2009

1.0% of adolescents age 12 to 17 years are obese

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adolescents age 14 to 17 years who reported having smoked on one or more of the past 30 days.

**How the Measure is Defined** Teens were asked if they smoked cigarettes in the past 30 days. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. These and other illnesses associated with tobacco use result in health care expenditures of more than \$53 billion annually in the United States. Currently, estimates of annual smoking-associated economic costs in the United States are more than \$167 billion.

**Healthy People 2020 Objective** Reduce cigarette smoking among adolescents (in grades 9 through 12) to 16.0% or less.

## **Service Area Experience**

**Measurement Period** 2009

3.4% of adolescents age 14 to 17 years smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

# Binge Drinking

**What's Being Measured** The proportion of adolescents age 12 to 17 years who reported binge drinking in the past 30 days.

**How the Measure is Defined** Teens were asked the number of alcoholic beverages they consumed at the same time or within a couple of hours during the past month. Binge drinking is defined as drinking 5 or more alcoholic beverages for males or 4 or more alcoholic beverages for females at the same time or within a couple of hours of each other during the past 30 days. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Binge drinking is associated with a profound social harm, economic costs as well as increased disease burden. Binge drinking is more common in males, during adolescence and young adulthood. Most binge drinkers are not familiar with the risks associated with binge drinking. Heavy regular binge drinking is associated with adverse effects on neurologic, cardiac, gastrointestinal, hematologic, immune, musculoskeletal organ systems as well as increasing the risk of alcohol induced psychiatric disorders. A US-based review of the literature found that up to one third of adolescents binge drink, with six percent reaching the threshold of having an alcohol-related substance use disorder. Binge drinking during adolescence is associated with traffic accidents and other types of accidents, violent behavior as well as suicide. The more often a child or adolescent binge drinks and the younger they are the more likely that they will develop an alcohol use disorder including alcoholism. A large number of adolescents who binge drink also consume other psychotropic substances.

**Healthy People 2020 Objective** Reduce the proportion of adolescents age 12 to 17 years who reported they engaged in binge drinking during the past month to 8.6%

## **Service Area Experience**

**Measurement Period** 2009

5.6% of adolescents age 12 to 17 years reported binge drinking

**Source of Data** UCLA Center for Health Policy Research

## School Readiness (Parenting Practices)

**What's Being Measured** Children age 0 to 5 years who are read to daily by a parent or family member, are played music or sung songs to daily by a parent or family member, and are taught letters, words, or numbers daily by a parent or family member.

**How the Measure is Defined** Parents were asked about these practices (self-reported) in the 2011 Los Angeles County Health Survey.

**Why the Measurement is Helpful** Evidence shows that experiences in the early years of life are extremely important for a child's health development and lifelong learning. How a child develops during this time affects future cognitive, social, emotional, and physical development, which increases school readiness and later success in life.

**Healthy People 2020 Objective** Increase the proportion of parents who read to their children age 0 to 5 years to 52.6%.

(Note: There are no Healthy People 2020 objectives for played music or sung songs and taught letters, words or numbers.)

### Service Area Experience

#### Measurement Period 2011

79.3% of children age 0 to 5 years are read to daily

65.5% of children age 0 to 5 years are played music or sung songs to daily

58.6% of children age 0 to 5 years are taught letters, words, or numbers daily

**Source of Data** Los Angeles County Department of Public Health

### Summary of Child and Adolescent Health Indicators

# Medical Insurance

**What's Being Measured** Adults age 18 to 64 years with health insurance the entire past year or only part of the past year.

**How the Measure is Defined** The percentage of adults with medical insurance includes persons with employment-based insurance, Medi-Cal or Healthy Families programs, privately purchased health insurance or other insurance. Uninsured persons include those without health insurance for all or part of the year. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Health insurance coverage is a key component of access to health care. Studies show that people with health insurance coverage report fewer access problems than those who are uninsured.

**Healthy People 2020 Objective** Increase the proportion of persons age 18 to 64 years with medical insurance to 100%.

## **Service Area Experience**

**Measurement Period** 2009

88.6% of adults age 18 to 64 years have medical insurance

**Source of Data** UCLA Center for Health Policy Research

## Source of Ongoing Care

**What's Being Measured** Adults age 18 to 64 years with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care; an estimated 7 percent of children age 17 years and under lack a specific source of ongoing care. Uninsured persons under age 65 years are more likely to lack a usual source of care than those who have either public or private health insurance.

**Healthy People 2020 Objective** Increase the proportion of persons age 18 to 64 years who have a specific source of ongoing care to 89.4%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **Service Area Experience**

**Measurement Period** 2009

90.3% of adults age 18 to 64 years have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

# Physical Activity

**What's Being Measured** The proportion of adults age 18 years and older who obtain recommended physical activity each week – aerobic exercise and muscle strengthening.

**How the Measure is Defined** Adults were asked about their physical activity levels (i.e., time spent doing moderate exercise, vigorous exercise and muscle strengthening). Results are from the 2011 Los Angeles County Health Survey.

**Why the Measurement is Helpful** Regular physical activity can improve the health and quality of life of Americans of all ages, regardless of the presence of a chronic disease or disability. Among adults and older adults, physical activity can lower the risk of: early death, coronary heart disease, stroke, high blood pressure, type 2 diabetes, breast and colon cancer, falls, and depression.

## Healthy People 2020 Objectives

- (1) Increase the proportion of adults age 18 years and older who obtain the recommended amount of aerobic exercise each week (at least 150 minutes per week of moderate exercise or at least 75 minutes of vigorous exercise) to 47.9%
- (2) Increase the proportion of adults age 18 years and older who obtain the recommended amount of muscle strengthening exercise each week (at least two days per week) to 24.1%
- (3) Increase the proportion of adults 18 years and older who obtain the recommended amount of aerobic and muscle strengthening exercise each week to 20.1%

## Service Area Experience

### Measurement Period 2011

66.5% of adults age 18 years and older obtained recommended aerobic exercise

44.1% of adults age 18 years and older obtained recommended muscle strengthening

37.4% of adults age 18 years and older obtained recommended aerobic and muscle strengthening exercise

**Source of Data** Los Angeles County Department of Public Health

# Healthy Weight and Obesity

**What's Being Measured** The proportion of adults age 20 to 64 years who are at a normal, healthy weight and those that are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Overweight and obesity are associated with four of the ten leading causes of death – coronary heart disease, some types of cancer, stroke and type 2 diabetes – as well as a range of other negative health outcomes, such as gallbladder disease, respiratory dysfunction, gout and osteoarthritis. The prevalence of overweight among Americans increased from 1988-1994 to 1999-2002 due to imbalances in caloric intake and energy expenditure. By 1999-2002, nearly one in three adults was obese. The estimated cost of obesity to the United States was \$117 billion in 2000.

**Healthy People 2020 Objectives** Increase the proportion of adults age 20 years and older who are at a healthy weight to 33.9% (BMI of 18.5 to 24.99).

Reduce the proportion of adults age 20 years and older who are obese (BMI of 30 or more) to 30.5%.

## **Service Area Experience**

### **Measurement Period** 2009

52.8% of adults age 20 to 64 years are at a healthy weight

12.4% of adults age 20 to 64 years are obese

**Source of Data** UCLA Center for Health Policy Research

# High Blood Pressure

**What's Being Measured** The proportion of adults age 18 to 64 years who were ever diagnosed with high blood pressure.

**How the Measure is Defined** Adults were asked "Has a doctor ever told you that you have high blood pressure?" Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Heart disease is the leading cause of death for all people in the United States and stroke is the third leading cause of death. Heart disease and stroke continue to be major causes of disability and significant contributors to increases in health care costs in the U.S. High blood pressure is known as the "silent killer" and remains a major risk factor for coronary heart disease, stroke and heart failure. About 50 million adults in the United States have high blood pressure with many still unaware that they have this condition. High blood pressure is more common in older persons.

**Healthy People 2020 Objective** Reduce the proportion of adults age 18 years and older with high blood pressure to 26.9%.

## **Service Area Experience**

**Measurement Period** 2009

15.3% of adults age 18 to 64 years diagnosed with high blood pressure

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adults age 18 to 64 years who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. These and other illnesses associated with tobacco use result in health care expenditures of more than \$53 billion annually in the United States. Currently, estimates of annual smoking-associated economic costs in the United States are more than \$167 billion.

**Healthy People 2020 Objective** Reduce cigarette smoking among adults age 18 years and older to 12% or less.

## **Service Area Experience**

**Measurement Period** 2009

15.3% of adults age 18 to 64 years smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

### Summary of Adult Health Indicators

SPA 5 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2009 and 2011

Indicator	SPA 5		County Rate	California Rate	Target Rate
	Rate	Status			
Health Access					
Insured All or Part of Year Age 18 to 64 Years	88.6%	-	81.7%	83.9%	100%
Usual Source of Ongoing Care Age 18 to 64 Years	90.3%	+	78.8%	81.5%	89.4%
Health Behaviors					
Recommended Aerobic Exercise Adults 18 Years and Older	66.5%	+	61.8%	n/a	47.9%
Recommended Muscle Strengthening Adults 18 Years and Older	44.1%	+	37.1%	n/a	24.1%
Recommended Aerobic and Muscle Strengthening Adults 18 Years and Older	37.4%	+	29.7%	n/a	20.1%
Healthy Weight Age 20 to 64 Years	52.8%	+	40.7%	40.6%	33.9%
Obese Age 20 to 64 Years	12.4%	*	23.4%	23.1%	30.5%
Diagnosed with High Blood Pressure Age 18 to 64 Years	15.3%	+	21.8%	20.4%	26.9%
Currently Smoke Cigarettes Age 18 to 64 Years	15.3%	-	14.3%	14.6%	12.0%

Notes:

Target rate is Healthy People 2020 objective

## Section 9: Senior Health

This section includes:

---

- Demographic overview of seniors age 65 years and older in UCLA Health System Service Area
- Findings from the 2009 California Health Interview Survey for SPA 5 benchmarked to Healthy People 2020 targets
- Comparison of SPA 5 senior health indicators to Los Angeles County and California

Key used to summarize SPA 5 experiences benchmarked to Healthy People 2020 Targets:

---

	Met
	Not Met
	Result is Statistically Unstable

Detailed information – at the ZIP Code level – can be found in:

---

- Appendix C: Age Group Detail

## Seniors Age 65 Years and Older

**What's Being Measured** Seniors 65 years of age and older.

**How the Measure is Defined** The percentage of the population 65 years and older is calculated by dividing this age group by the total population.

### Service Area Experience

#### **Seniors Age 65 Years and Older**

UCLA Health System Service Area

2013

Age Group	Number of Persons	Percent of Total Population
65 to 74 Years	52,448	8.0%
75 to 84 Years	28,990	4.4%
85 Years and Older	16,444	2.5%
<b>Total 65 Years and Older</b>	<b>97,882</b>	<b>14.9%</b>
Total Population	656,728	—

*Note: Percentages rounded*

*Source: Nielsen*

## Senior Households by Income Group

**What's Being Measured** Senior households in various income groupings.

**How the Measure is Defined** Household income includes the total money received in the stated calendar year by all household members 65 years and older. The income is presented in terms of current dollars for 2010. The number of households with an annual household income is reported for the following five income groups: (1) under \$15,000 (2) \$15,000 to \$24,999 (3) \$25,000 to \$49,999 (4) \$50,000 to \$74,999 and (5) \$75,000 and over. The sum of households with these five income groupings is the 2013 senior households.

### Service Area Experience

#### **Senior Households by Income Group**

UCLA Health System Service Area

2013

<b>Seniors Households by Income Group</b>	<b>Number of Senior Households</b>	<b>Percent of Senior Households</b>
Under \$15,000	10,271	15.7%
\$15,000 to \$24,999	8,374	12.8%
\$25,000 to \$74,999	20,742	31.7%
\$75,000 and Over	25,969	39.7%

## Comparison to Los Angeles County

### **Senior Households by Income Group**

Los Angeles County

2013

<b>Seniors Households by Income Group</b>	<b>Number of Senior Households</b>	<b>Percent of Senior Households</b>
Under \$15,000	139,821	21.1%
\$15,000 to \$24,999	107,127	16.1%
\$25,000 to \$74,999	249,170	37.5%
\$75,000 and Over	168,085	25.3%
<b>Senior Households</b>	<b>664,203</b>	<b>100.0%</b>

*Source: Nielsen*

## Source of Ongoing Care

**What's Being Measured** Persons age 65 years and older with a specific source of ongoing care

**How the Measure is Defined** Specific sources of ongoing care may include any of the following: doctor's office/HMO/Kaiser, community, government or hospital clinic, emergency room/urgent care, health center facility, or some other place. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Access to care depends in part on access to an ongoing source of care. People with a usual source of health care are more likely than those without a usual source of care to receive a variety of preventive health care services. An estimated 15 percent of adults in the US lack a usual source of care.

**Healthy People 2020 Objective** Increase the proportion of persons age 65 years and older who have a specific source of ongoing care to 100%

Note: The Healthy People 2020 objective excludes emergency rooms as a usual source of care.

### **Service Area Experience**

**Measurement Period** 2009

95.3% of seniors age 65 years and older have a specific source of ongoing care

**Source of Data** UCLA Center for Health Policy Research

## Flu Shots in Past Year

**What's Being Measured** Seniors age 65 years and older who received a flu shot in the past year.

**How the Measure is Defined** Seniors age 65 years and older were asked "During the past 12 months, have you had a flu shot?" Results are from the 2009 California Health Interview Survey.

**Why the Measure is Helpful** Infectious diseases remain a cause of illness, disability and death and impose a tremendous burden on society, both physically and financially. Vaccines are an important defense against influenza and pneumonia.

**Healthy People 2020 Objective** Increase the proportion of noninstitutionalized adults age 65 years and older who are vaccinated annually against influenza to 90%.

### **Service Area Experience**

**Measurement Period** 2009

73.0% of seniors age 65 years and older received a flu shot in the past year

**Source of Data** UCLA Center for Health Policy Research

## Healthy Weight and Obesity

**What's Being Measured** The proportion of seniors age 65 years and older who are at a normal, healthy weight and those that are obese.

**How the Measure is Defined** Adults were asked their height and weight. These measures were used to calculate a BMI (or Body Mass Index). BMI is calculated by dividing weight (in kilograms) by height squared (in meters). A BMI from 0 to 18.49 is described as underweight, a BMI from 18.5 to 24.99 is described as normal, healthy weight; a BMI from 25.0 to 29.99 is described as overweight, and a BMI of 30.0 or higher is described as obese. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Overweight and obesity are associated with four of the ten leading causes of death – coronary heart disease, some types of cancer, stroke and type 2 diabetes – as well as a range of other negative health outcomes, such as gallbladder disease, respiratory dysfunction, gout and osteoarthritis. The prevalence of overweight among Americans increased from 1988-1994 to 1999-2002 due to imbalances in caloric intake and energy expenditure. By 1999-2002, nearly one in three adults was obese. The estimated cost of obesity to the United States was \$117 billion in 2000.

**Healthy People 2020 Objectives** Increase the proportion of adults age 20 years and older who are at a healthy weight to 33.9% (BMI of 18.5 to 24.99). Reduce the proportion of adults age 20 years and older who are obese (BMI of 30 or more) to 30.5%.

### Service Area Experience

#### Measurement Period 2009

46.7% of seniors age 65 years and older are at a healthy weight

22.4% of seniors age 65 years and older are obese

**Source of Data** UCLA Center for Health Policy Research

# High Blood Pressure

**What's Being Measured** The proportion of seniors 65 years and older who were ever diagnosed with high blood pressure or high blood cholesterol.

**How the Measure is Defined** Adults were asked "Has a doctor ever told you that you have high blood pressure?" Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Heart disease is the leading cause of death for all people in the United States and stroke is the third leading cause of death. Heart disease and stroke continue to be major causes of disability and significant contributors to increases in health care costs in the U.S. High blood pressure is known as the "silent killer" and remains a major risk factor for coronary heart disease, stroke and heart failure. About 50 million adults in the United States have high blood pressure with many still unaware that they have this condition. High blood pressure is more common in older persons.

**Healthy People 2020 Objective** Reduce the proportion of adults age 20 years and older with high blood pressure to 26.9%

## **Service Area Experience**

**Measurement Period** 2009

57.2% of seniors age 65 years and older have high blood pressure

**Source of Data** UCLA Center for Health Policy Research

# Tobacco Use

**What's Being Measured** The proportion of adults age 65 years and older who currently smoke cigarettes.

**How the Measure is Defined** Adults were asked if they smoked cigarettes in the past 30 days. Results are from the 2009 California Health Interview Survey.

**Why the Measurement is Helpful** Tobacco use is the leading preventable cause of death in the United States. Tobacco use is a major risk factor for heart disease, stroke, emphysema and cancers of the lung, pharynx, oral cavity, esophagus, pancreas and bladder. These and other illnesses associated with tobacco use result in health care expenditures of more than \$53 billion annually in the United States. Currently, estimates of annual smoking-associated economic costs in the United States are more than \$167 billion.

**Healthy People 2020 Objective** Reduce cigarette smoking among adults age 18 years and older to 12% or less.

## **Service Area Experience**

**Measurement Period** 2009

3.9% of seniors age 65 years and older smoke cigarettes

**Source of Data** UCLA Center for Health Policy Research

### Summary of Senior Health Indicators

SPA 5 Compared to Los Angeles County, California and Healthy People 2020 Targets  
2009

Indicator	SPA 5		County Rate	California Rate	Target Rate
	Rate	Status			
Health Access					
Usual Source of Ongoing Care Age 65 Years and Older	95.3%	*	93.8%	95.0%	100%
Flu Shot Past Year Age 65 Years and Older	73.0%	-	63.8%	65.9%	90%
Health Behaviors					
Healthy Weight Age 65 Years and Older	46.7%	+	39.0%	39.1%	33.9%
Obese Age 65 Years and Older	22.4%	*	21.9%	22.5%	30.5%
Diagnosed with High Blood Pressure Age 65 Years and Older	57.2%	-	61.9%	59.6%	26.9%

## **Section 10: Community Consultation**

This section includes:

---

- Overview of the community consultation process
- Analysis of the community consultation

Additional information regarding participants in the community consultation can be found in:

---

- Appendix E: Community Consultation Participants

## Overview of Process for Community Consultation

The project consultant completed 25 telephone interviews (100 percent response rate) during a five-week period beginning on April 17<sup>th</sup> and ending on May 21, 2013.

Prior to the interviews, UCLA Health System identified 25 contacts for interviews. Individuals selected for interviews represented non-profit health community-based health organizations serving the poor and uninsured, Los Angeles County Department of Public Health, Los Angeles County Department of Mental Health, academic experts with clinical practices in the areas of gerontology, pediatrics, AIDS, public health, medicine, and physiology; a local hospital emergency department, a local school district, a local health plan serving the poor, and a regional center serving SPA 5 that provides services to individuals with developmental disabilities. Once individuals confirmed their interest in participation, a letter, describing the purpose of the phone survey and the questions to be posed in a telephone interview, was distributed via email.

Those participating in the community consultation were asked to respond to the following questions:

1. In your opinion, what are our community's top three health issues?
2. What neighborhood areas or populations do you believe to be most affected by these health issues?
3. Working collaboratively, what specific actions do you think the community should take to address these health issues?
4. What collaborative roles or actions could UCLA hospitals take to address community health issues?

*Note: UCLA hospitals include Ronald Reagan UCLA Medical Center, Santa Monica UCLA Medical Center and Orthopaedic Hospital, and Resnick Neuropsychiatric Hospital at UCLA.*

Following completion of the interviews, responses were analyzed and summarized based on general concepts and common themes.

## **Community's Top Health Issues**

The following were identified as the community's top health issues (based on frequency of mention):

- Care and coordination of chronic health conditions
- Wellness and disease prevention
- Mental health disorders
- Substance abuse and addiction
- Aging population
- Homelessness
- Dental care

Each issue is described briefly below.

### **Care and Coordination of Chronic Health Conditions**

Specific health conditions mentioned in the interviews:

- Diabetes
- Obesity (including morbid obesity in children)
- Heart disease and hypertension
- Stroke
- Asthma
- HIV/AIDS

Challenges associated with care and coordination of chronic health conditions:

- Lack of a primary care physician
- Limited access to specialty services, such as orthopedics and neurology, in a timely manner
- HMO Medi-Cal patients referred by clinics and other safety net providers cannot be seen at local hospitals
- Lack of transportation to providers located outside the service area (such as Children's Hospital Los Angeles and California Hospital Medical Center) that accept HMO Medi-Cal coverage
- Safety net providers becoming more stretched due to decreases in State and other funding
- Improper use of Emergency Medical Services system places challenges on area hospitals and paramedics
- High deductibles and copayments
- Some individuals with chronic health conditions also have co-occurring mental illness and substance abuse

## **Wellness and Disease Prevention**

Specific wellness and screening programs mentioned in interviews:

- Cardiovascular risk screening
- Diabetes screening
- Cervical cancer screening (pap smears)
- Post natal care
- Physical activity programs
- HIV testing (finding those who are positive and preventing the spread of HIV)
- Peer referral for sexually transmitted diseases such as HIV and hepatitis

Barriers and challenges associated with wellness and disease prevention:

- Transportation
- Time off from work or school
- Availability of child care at preventive health visit
- Low health literacy of Medi-Cal managed care population
- Health education no longer available in public schools

## **Mental Health Disorders**

Specific mental health conditions mentioned in the interviews:

- Anxiety
- Depression
- Mood disorders
- Bipolar disorders
- Psychotic disorders
- Schizophrenia
- Suicide ideation among students
- Suicide

Challenges associated with mental health disorders:

- Lack of providers who will see uninsured patients
- Limitations on government insurance payments to non-licensed personnel, such as social workers and family therapists
- Limited access to psychiatric care in a timely manner

- Mental health issues complicated by co-occurring health conditions
- Mental health diagnoses and domestic violence
- Weak linkages to (physical) health care system, such as primary care physicians lack of willingness to deal with mental health issues or difficulties getting physicals for children to rule out physical conditions prior to being able to prescribe medications

## **Substance Abuse and Addiction**

Specific substances mentioned in the interviews:

- Alcohol
- Marijuana
- Methamphetamines
- Crack cocaine
- Stimulants
- Prescription drugs for pain
- Newer street drugs
- IV drugs use

Challenges associated with substance abuse and addiction:

- Many individuals – reported as high as 70 percent – with substance abuse problems also have mental health issues (dual diagnosis)

## **Aging Population**

Challenges of aging community:

- Many elderly live on their own, without an adequate support structure in place
- Many elderly may not remember or understand physician orders, medications, maintaining health and well-being

Health care needs associated with aging population (and not currently available):

- Community-based mental health resources for management of mental health issues, such as depression, dementia, and bipolar disorder
- Centralized support services for elderly
- Post hospital discharge services – from several days to a week – so that elderly do not return to hospitals for re-admissions
- Support groups for depression and Alzheimer's disease

- Support groups for arthritis
- Adult day care services
- Affordable social support services for elderly, including caregiving and housing
- Availability of adequate and timely dental services
- Prevention of falls and injuries

## **Homelessness**

Challenges of homelessness:

- Malnutrition
- Mental illness
- Communicable diseases
- Wound control
- 30% chance to getting Hepatitis C
- Individuals debilitate so much faster

Health care needs associated with homeless population (and not sufficiently available):

- Better housing access
- Quick approval for Medi-Cal services to include physician care and medications

## **Dental Care**

Challenges of dental care:

- Dental care is separate from health care (including insurance coverage and providers)

## Neighborhood Areas or Populations Most Affected By Health Issues

Many of the participants in the interviews responded that low socio-economic status was generally associated with these health issues.

Neighborhood areas specifically mentioned by those participating in the interviews included:

- Venice (near Rose Avenue)
- Santa Monica (Pico neighborhood near the 10 freeway)
- Mar Vista (along the 10 freeway)
- West Los Angeles (persons living in housing projects)
- Palms
- Culver City
- Culver City/Ladera

Populations specifically identified by those participating in the interviews:

- Poor
- Families who have lost their jobs and/or homes
- Latinos
- African American community
- Those with limited English proficiency
- Heterosexual men (in regards to HIV/AIDS)

Those participating in the community consultation identified the following populations related to *mental health disorders*:

- Late teens to early twenties
- Adults
- Elderly
- Males (in relation to suicide)

Those participating in the community consultation identified the following populations related to *aging population*:

- Isolated and homebound elderly
- Frail elderly
- Persons age 85 years and older
- Individuals living in Board and Care facilities (in regards to obesity)

Those participating in the community consultation identified the following populations related to *dental care*:

- Low income persons
- Undocumented persons
- Individuals 18 years and older who no longer are covered by Denti-Cal
- Elderly persons

## **Specific Actions Community to Take to Collaboratively Address Health Issues**

The most popular response to actions the community should take to address health issues was agencies working together to address community health and social issues. Several felt reviewing data and developing an action plan to improve health and well-being across the life course would be best. Many of those interviewed identified multi-agency collaborations currently in place, such as clinics at high schools, primary care provided onsite at Ocean Park Community Center (OPCC), and a respite bed program, involving local hospitals, for the homeless. Some recognized the size and differences of communities in SPA 5, for example, describing Santa Monica as relatively cohesive and West Los Angeles, Venice and Mar Vista as considerably more fragmented.

Among the items to consider in working collaboratively:

- Develop a better system of care, including specialty care, for safety net population
- Prevention programs focusing on weight loss, healthy eating, diabetes, physical activity, smoking cessation, and sex education
- Increase awareness of personal risks of diseases
- Advocacy to government for (long-term) funding for substance abuse
- Advocacy to government for affordable housing for the poor and seniors
- Offer more physical activity programs, more parks, and safe places to exercise
- Identify creative ways to improve transportation for individuals (such as shuttle vans to transport individuals for needed specialty care, safer bike lanes, and more efficient bus and light rail lines)
- Develop more social support and case management services for seniors
- Identify organization contacts to call on when program issues arise

## **Collaborative Roles or Actions UCLA Hospitals Could Take to Address Health Issues**

Many of those interviewed in the community consultation recognized UCLA Health System for its existing role as a teaching hospital and research institution. Those participating in the community consultation suggested the following collaborative roles or actions for UCLA hospitals:

- Partnership with community
- Health access and insurance
- Coordination of services when patients are hospitalized at UCLA hospitals
- Hospital-related services
- Community education
- Training of physicians and healthcare providers

Each suggested role or action is described briefly below.

### **Partnership with Community**

- Attend meetings of Westside Health Coalition
- Attend meetings of Department of Mental Health
- Champion a suicide prevention collaborative
- Coordinate activities with the fitness and wellness community
- Increase collaboration with senior service organizations
- Continue and extend hospital-community partnership around child and parent education (as currently exists at The Commons' Santa Monica-based center)
- Greater partnering with community based organizations
- Coordinate efforts with schools and community based organizations in high-risk communities
- Provide a program of education (with curriculum) to some Santa Monica-Malibu Unified School District (SM-MUSD) schools
- Provide "Kids in Dynamic Shape," an eight-week weight loss program that students and parents can attend

### **Health Access and Insurance**

- Accept a greater number of uninsured patients or patients without the ability to pay for care from government and community organizations
- Accept a greater number of patients with Medi-Cal and HMO Medi-Cal, particularly adults in need of specialty care

- Focus resources on reducing emergency department visits and unnecessary hospitalizations through improved access to primary and specialty care
- Accept client referrals from Department of Mental Health clinics
- Work with Department of Mental Health to provide ongoing, on-site weekly consulting services (this arrangement previously existed)
- Collaborate with SM-MUSD to offer a place (i.e., UCLA clinic) where injured students or students with a mental health crisis can be sent
- Offer financial counseling services to UCLA Health System patients with HIV/AIDS

### **Coordination of Services When Clients are Hospitalized at UCLA Hospitals**

- Improve communications with community providers when clients are hospitalized
- Improve coordination by discharge planning, social services, and case managers with community based organizations serving seniors and the homeless
- Outreach and coordination with other AIDS services organizations

### **Hospital-Related Services**

- Develop a cross emergency department communication system for notification of contagious infectious diseases
- Produce easy-to-read materials in multiple languages (for example, admission forms, Advance Directives, and treatment plans)
- Provide onsite interpreter services
- Offer transportation to/from medical appointments (for low income population)
- Provide funding support for UCLA clinics that manage the health of morbidly obese children

### **Community Education**

- Continue to have professors go out to community (all geographies in the service area) and speak on topics such as disease prevention, nutrition, and physical activity
- Provide screenings for common health concerns
- Share findings of latest funded research with the community
- Share research on Alzheimer's disease (beyond the UCLA community)
- Offer scholarships for children and students to attend UCLA Camp

## **Training of Physicians and Health Care Professionals**

- Train health care professionals on how to work with low income, minority, and physically disabled populations
- Rotate trainees through Didi Hirsch Community Mental Health Center (an ambulatory care setting)
- Educate physicians about the importance of people getting tested for HIV

## **Section 11: Priority Community Health Needs**

This section includes:

---

- Description of the process and criteria used to identify priority community health needs
- Summary and description of priority community health needs

## Process and Criteria Used

In preparing the community health needs assessment, UCLA Health System combined quantitative data about service area demographics, availability of health insurance, health access to and utilization of key services, health status, and health behaviors with qualitative data on opinions of important health issues in the community. Many who provided these opinions – including community health providers, representatives from Los Angeles County Departments of Public Health and Mental Health, and others with combined academic expertise and clinical experiences – have been in their positions for extended periods of time and offered valuable perspectives on health care in the community.

The following criteria were used to identify and prioritize significant health needs in the community:

- Healthy People 2020 target not met
- Number of persons affected
- Identification and/or validation as an important health issue in the community consultation
- Identified by community organizations as an opportunity to work collaboratively to address health issue

The following priority health needs were identified in the community health needs assessment:

- Access to health care addressing care and management of chronic health conditions
- Health promotion and disease prevention
- Mental health disorders
- Substance abuse and addiction

In addition to these priority health needs, several social issues were also raised regarding the following: aging population, homelessness, and dental care.

# Identified Community Health Needs

The following are priority community health issues in the UCLA Health System Service Area:

- Access to health care addressing care and management of chronic health conditions

Healthy People 2020 targets were not met in regards to having medical insurance (persons under age 65), usual source of ongoing care (all ages), experiencing delays in getting needed medical care (all ages), and experiencing delays in getting prescription medications (all ages).

Heart disease, cancer, obesity, diabetes, and asthma were identified – in the data and/or the community consultation – as important chronic health conditions facing the population.

Different health care facilities and other medical resources (including hospitals, licensed community and free clinics, and providers with specialized health expertise) are located in the service area. Variations in government insurance products (for example, Medi-Cal and managed Medi-Cal) accepted by providers and gaps in coordination of services among providers result in problems in the care and management of chronic diseases for low income, underinsured, and uninsured persons.

- Health promotion and disease prevention

Healthy People 2020 targets were not met in regards to adult cigarette smoking, seniors who received a flu shot in the past year, and seniors ever diagnosed with high blood pressure. Leading causes of preventable deaths in SPA 5 are coronary heart disease, suicide, drug overdose, liver disease, and breast cancer, as measured by Years of Potential Life Lost before age 75 years.

Those participating in the community consultation identified needs for various health screenings, including cardiovascular risk, diabetes, and HIV testing as well as physical activity programs for children, teens, and adults.

- Mental health disorders

Healthy People 2020 targets were limited in mental health (death rate due of suicide met the objective) and data was not available for other targets.

Participants in the community consultation identified a variety of mental health disorders, such as anxiety, depression, mood disorders, bipolar disorders, psychotic disorders, schizophrenia, and suicide ideation among students, facing the population they serve.

Low-income, underinsured, and uninsured persons face many of the same challenges in accessing mental health care related to payment for services and coordination of services between providers as those with physical health conditions. In addition, further challenges exist surrounding the stigma of mental health and weak linkages to the physical health system.

- Substance abuse and addiction

Healthy People 2020 targets were limited in substance abuse (death rate due of cirrhosis met the objective) and data was not available for other targets.

Substances specifically identified in the community consultation include: alcohol, marijuana, methamphetamines, crack cocaine, stimulants, prescription drugs for pain, newer street drugs and IV drugs.

Many individuals with substance abuse problems also have mental health issues, according to those participating in the community consultation.

## **Section 12: Health Care Facilities and Other Resources**

This section includes:

---

- Summary and listing of health care facilities and other resources in the UCLA Health System Service Area

## **Health Care Facilities and Other Resources**

In the ZIP codes comprising the hospital service area, there are ten open hospitals (one hospital is in suspense), 13 licensed free and community clinics, and three psychology clinics. See the table on the next page for a summary of health care facilities by city/ZIP code.

In addition, the Westside Health Coalition, a quarterly meeting of providers in Service Planning Area (SPA 5), is another health care resource.

### Summary of Health Care Facilities, by City and ZIP Code

Facilities Located in UCLA Health System Service Area

2012

Facility Name	Address	City	ZIP	Facility License Category	Hospital Detail		Status

Notes:

Data is as of December 2012

EMS = Emergency Medical Services available at hospital facility; designation may be basic or comprehensive (noted as COMP)

Beds = Total number of beds

A **free clinic** is defined as a clinic operated by a tax-exempt, nonprofit corporation supported in whole or in part by voluntary donations, bequests, gifts, grants, government funds or contributions, that may in the form of money, goods, or services. Patients are not charged for services rendered or for drugs, medicines, appliances, or apparatuses furnished.

A **community clinic** is defined as a clinic operated by a tax-exempt corporation that is supported and maintained in whole or in part by donations, bequests, gifts, grants, government funds or contributions, that may be in the form of money, goods, or services. Any charges to the patient shall be based on the patient's ability to pay, utilizing a sliding fee scale.

## Listing of Organizations Represented in the Community Consultation (2013)

Organizations are listed alphabetically.

- Didi Hirsch Community Mental Health Center
- Edelman Westside Mental Health Center \*
- L.A. Care Health Plan
- L.A. Gay & Lesbian Center
- Los Angeles County Department of Mental Health \*
- Los Angeles County Department of Public Health \*
- Ocean Park Community Center (OPCC)
- Santa Monica UCLA Medical Center and Orthopaedic Hospital, Nethercutt Emergency Center
- Santa Monica-Malibu Unified School District
- UCLA Health System - Department of Medicine, Center for Clinical AIDS Research and Education (CARE) \*
- UCLA Health System - Department of Medicine, Division of Geriatrics \*
- UCLA Health System - Department of Medicine, Division of Pulmonary and Critical Care Medicine
- UCLA Health System - Department of Pediatrics, Division of General Pediatrics
- UCLA Schools of Medicine and Public Health and UCLA Fit for Healthy Weight Program
- Venice Family Clinic
- Westside Family Health Center
- Westside Regional Center
- WISE & Healthy Aging

*Note: An asterisk indicates that more than one contact person from the organization was interviewed in the community consultation*
