Sports Neurology – Neurotrauma Fellowship

Fellowship Overview

The UCLA Steve Tisch BrainSPORT (Safety, Performance, Outreach, Research and Treatment) Program is a multidisciplinary research-based treatment center for youth sport concussions. There are two options for this fellowship:

- One-year clinical fellowship
- Two-year clinical and research fellowship

Core Training: Fellows receive broad clinical training including: outpatient diagnosis and treatment of concussion and post-concussive symptoms, pre-season baseline testing, sideline neurological evaluation, peripheral neurology due to sports injury as well as some experience with more severe TBI resulting from sports/recreation. Additionally, our program works closely with the Wounded Warrior Project and UCLA Operation Mend, so fellows will gain exposure to TBI patients through the wounded warrior care network.

Fellows choosing the two-year research fellowship will have the opportunity to:

- Participate in at least one clinical or basic science research project within the Departments of Pediatrics, Neurology, or within the UCLA Brain Injury Research Center (BIRC)
- Submit at least one publication (please note - dedicated research time is built into both years of the training program)

The UCLA Steve Tisch BrainSPORT Program has relationships with various professional and collegiate athletic programs and also has close partnerships with the U.S. Military and U.S. Department of Veteran Affairs, through UCLA Operation Mend. This program is truly one of a kind and is one of few sports neurology fellowships available.

Application Process and Eligibility Requirements

Application Requirements: Curriculum-vitae – Personal statement – Three letters of reference

- We are still accepting applications for 2017 start
- Faculty is attending the American Academy of Neurology Annual Meeting 2017 in Boston, MA and will be available to meet

Please contact Philip Rosenbaum if you are interested in meeting or have questions about the program: PRosenbaum@mednet.ucla.edu or (310) 825-8681
