

OUR EXPANSION MEANS MORE SERVICES, SUPPORT

Johnese Spisso, President, UCLA Health

AS UCLA HEALTH continues to open primary and specialty care offices throughout the greater Los Angeles region, I would

like to highlight some new and noteworthy developments:

More OB/GYN and pediatrics providers. A recent focus of our community expansion has been to add OB/GYN and pediatrics offices to every region. We recently added new obstetrician-gynecologists in Santa Clarita, Westlake Village and Torrance, and opened or expanded pediatrics practices in Manhattan Beach and Pasadena.

Additional specialty services. We also expanded our subspecialty services in new and existing locations. We added advanced heart failure specialists to our Santa Clarita, Torrance and Thousand Oaks offices, and breast surgeons to Pasadena, Burbank, Laguna Hills and Orange. We also opened a new cardiology office in downtown L.A., and a hematology-oncology office in San Luis Obispo—our northernmost office yet.

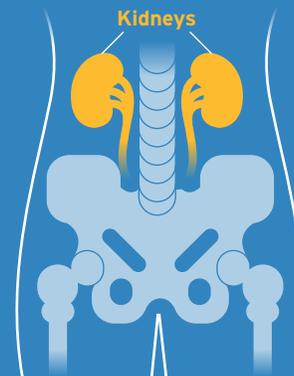

New strategic partnerships. To ensure our patients receive top-notch orthopaedic care, we entered a strategic partnership with the Southern California Orthopedic Institute (SCOI), a medical group of 40 surgeons with offices in the San Fernando, Conejo and Santa Clarita Valleys. We were also recently named medical partner of the Los Angeles Dodgers. Play ball!

An exciting future. As part of UCLA Health's continued expansion, we plan to establish a presence in additional community hospitals, to expand our footprint in downtown L.A. and Marina del Rey, and to open a new pediatrics practice in Calabasas.

In the face of all these changes, our mission remains the same: to deliver leading-edge patient care, research, and education.

PREVENTIVE CARE

KIDNEY DISEASE 3 THINGS YOU NEED TO KNOW

Chronic kidney disease, or CKD, is a common condition that occurs when the kidneys are injured and cannot properly filter blood. Patients do not typically present with symptoms until kidney disease has progressed, which is why early detection is so important.

FUNCTIONS OF THE KIDNEYS

- The kidneys are part of the urinary system. They remove waste and toxins from the blood and produce urine.
- They maintain a healthy balance of water, salts and minerals in the body that allows vital organs to function properly.
- They are critical in red blood cell production and Vitamin D activation.
- They regulate blood pressure.

1 CHRONIC KIDNEY DISEASE IS COMMON

15%
U.S. population

+30 million
U.S. adults

RISK FACTORS FOR DEVELOPING CKD:

- Diabetes
- High blood pressure
- Heart disease
- Family history of CKD
- Over 60 years old

2 YOUR PRIMARY CARE PHYSICIAN CAN SCREEN FOR KIDNEY DISEASE

The standard blood and urine tests given at a physical can diagnose CKD. The glomerular filtration rate (GFR) is a measure of kidney function that is calculated with a patient's age and blood creatinine level. The lower the GFR, the more severe the disease. Protein in the urine also signals kidney disease.

GFR RATES (IN ML/MIN)

3 A HEALTHY LIFESTYLE IS IMPORTANT

There are five stages of kidney disease. In the earliest stages, making healthy lifestyle changes can slow down CKD's progression. Work with your health care team to ensure you are:

Dr. Nathan Samras is pictured in a UCLA Health Beverly Hills exam room with the Blumstein family, from L to R: Sara, Gideon, Isaac, Tara, William and Herbert.

PATIENT STORY

A FAMILY TRUSTS ONE DOCTOR FOR PRIMARY CARE

GIDEON AND TARA BLUMSTEIN both work in medicine: he is a surgical resident in orthopaedics at UCLA, and she is an occupational therapist at USC. Perhaps because of their careers, they understand the importance of having a relationship with their primary care physician, who serves as the leader of their health care team.

When they started seeing Dr. Nathan Samras almost two years ago, they agreed that his evidence-based focus and friendly, approachable demeanor made him the right fit for their family.

"I like that if I have a question, Dr. Samras will take the time to pull up an interesting study on that topic and share it with me," says Tara, 38. "He treats us as equals, and always helps us understand a diagnosis or weigh the costs and benefits of a medical decision."

"I like that he's very thorough," says

Gideon, also 38, "and has training in both internal medicine and pediatrics."

At the UCLA Health Beverly Hills office on Brighton Way—conveniently only a few miles from the Blumsteins' home—Dr. Samras says his dual board certification in internal medicine and pediatrics means that he can "take care of any person who walks through the door." This is why it made perfect sense for the Blumsteins to choose him as their children's physician as well.

"It's that whole two birds, one stone mentality," says Tara, noting that in her case, she actually handles three routine appointments in one morning, for

'Primary care is about relationships, and trust is essential.'

herself and then for her sons, Isaac, 3, and William, 17 months.

When Gideon's parents, Sara and Herbert Blumstein, moved to the area from Palo Alto a little over a year ago, they also selected the same home office, and in Sara's case, Dr. Samras as her primary care physician.

"It's nice to know that if we have a problem in the family, he already knows us all, and has a deeper understanding of what is going on," Sara says.

Over time, the Blumsteins say they've developed a real respect and trust for their physician, which Dr. Samras says allows him to do his job well.

"Primary care is about relationships, and trust is essential," Dr. Samras says. "Like any other consultant in someone's life, from a mechanic to a clergy person, I want my patients to know that I'm giving them the right advice and providing care that is tailored to their needs."

He notes that if he tells a patient to go in for a mammogram or see a specialist, he wants them to believe this is the right call, and schedule the appointment. "Without that trust," he says, "I can't optimize a patient's care."

RADIOLOGY AND IMAGING SERVICES NEAR YOU

UCLA HEALTH NOW OFFERS imaging services in many community offices and stand-alone imaging centers. Each office uses state-of-the-art machines to run imaging studies, which are then read by subspecialty radiologists with advanced training.

Imaging services can be found at three types of sites at UCLA Health:

1. Primary care offices: Many primary care offices and some specialty offices offer x-ray and/or ultrasound services right in the clinic.

2. Imaging and interventional centers: UCLA Health also operates several imaging centers that offer x-ray, DEXA, mammogram, ultrasound, PET CT, CT and/or MRI services. In some cases, they also offer interventional radiology services, including imaging-guided biopsies and imaging-guided procedures.

3. Women's imaging centers: Women's imaging centers offer screening and diagnostic ultrasounds, 2D and 3D mammography, breast biopsies, and MR- or ultrasound-guided procedures.

Regardless of the location type, each site allows patients with a valid imaging order to walk in for an x-ray.

The adjacent map and key shows where UCLA Health offers imaging services. To reach the central diagnostic radiology scheduling line, call **310-301-6800**. Hours and services vary by location and are listed online.

Please note: Certain health plans supporting MPTF patients may not be considered in-network for hospital-licensed imaging locations. This may lead to higher out-of-pocket costs. Please check your insurance coverage and ask the radiology scheduler to only book your appointment at a non-hospital-licensed location.

The Checkup

COVERING ALL UCLA HEALTH/MPTF LOCATIONS, INCLUDING AGE WELL (WOODLAND HILLS), BOB HOPE (HOLLYWOOD), AND OFFICES IN CALABASAS, SANTA CLARITA, TOLUCA LAKE AND WEST L.A.

PRACTICE SPOTLIGHT

CALABASAS

NEW LOCATION

26585 W. Agoura Rd., Suite 330

Phone: (818) 876-1050

Hours: Monday - Friday: 8 am - 5 pm;
Saturday: 8 am - 4 pm.

Parking: Free parking in lot.

More info:

uclahealth.org/calabasas

GENERAL INFO

- This office replaces the Jack H. Skirball Health Center.
- Same day appointments are available for most medical needs.
- All visits should be scheduled by phone or online via the patient portal.

SPECIALTIES & SERVICES

- Internal medicine
- Family medicine
- Geriatric and palliative medicine
- Adolescent medicine
- Well-woman care
- Routine immunizations
- Blood draws and lab work
- X-ray
- Behavioral health services
- Pharmacist consults
- Social work

ABOUT THIS OFFICE

- A clinical lab is open in Suite 370 on Monday to Friday from 7:30 am - 5 pm.

- Additional specialties will be offered in the coming year, including pediatrics and pediatric specialties (Suite 360); diagnostic and interventional imaging services (Suite 210); and specialties including urology, OB/GYN, ENT and audiology (Suites 310 and 320).

SPECIALTY EXPANSION

COSMETIC DERMATOLOGY

UCLA Health now offers cosmetic dermatology services for patients with wrinkles, acne, sun damage and scarring, among other skin complaints. Services offered include:

- Botox
- Fillers
- Chemical peels
- Fractionated laser treatment
- Microneedling
- Microdermabrasion

Current locations: Beverly Hills, Santa Clarita, Santa Monica, Thousand Oaks and Westwood.

Phone: (310) 206-SKIN

More info:

uclahealth.org/dermatology

ONGOING PROGRAM

DIABETES EDUCATION

A diabetes educator is now available to meet one-on-one with patients every Wednesday in the Toluca Lake office. The registered nurse who leads the training can cover healthy eating, monitoring your blood sugar, and reducing your risk for diabetes-related complications, among other topics. Appointments are required.

Where: UCLA Health/MPTF Toluca Lake: 4323 Riverside Drive, Burbank

When: Wednesdays from 8 am - 5 pm

Phone: (818) 556-2700

More info: uclahealth.org/Toluca-lake

CLINICAL UPDATE

SKIN CANCER PREVENTION STARTS WITH YOU

Spring and summer are the perfect time to review general information about skin cancer, and learn how you can **PROTECT** yourself.

SKIN CANCER BASICS

- More than 5 million cases of non-melanoma skin cancer are diagnosed each year.
- Skin cancer is the most common type of cancer in the U.S., but also among the most preventable.

Protect yourself from the sun.

Apply a broad-spectrum sunscreen that blocks UVA and UVB rays. Don't forget to cover all sun-exposed areas on your body and reapply.

Risk factors for skin cancer include fair skin that burns and freckles easily; a history of sunburns; a family history of skin cancer; and the presence of numerous or atypical moles.

Outdoor activity planning is important. Whenever possible, avoid the sun's strongest rays between 10 am and 4 pm.

Tanning beds should be avoided.

Examine your skin monthly. Check for new growths or changes to existing moles, and report anything suspicious.

Consult your dermatologist once per year. Even if you don't have risk factors for skin cancer, a dermatologist can determine your skin's health and provide proper maintenance tips.

Take your skin seriously. Sun protection and early detection saves lives.
