

Gynecologic Pathology Grossing Guidelines

Specimen Type: TOTAL HYSTERECTOMY (for CERVICAL tumor)

Gross Template:

Labeled with the patient's name (***), medical record number (***), designated "****", and received [*fresh/in formalin*] is a *** gram [*intact/previously incised/disrupted*] [*total/supracervical hysterectomy/ total hysterectomy and bilateral salpingectomy, hysterectomy and bilateral salpingo-oophrectomy*]. The uterus weighs [***grams] and measures [***cm (cornu-cornu) x *** cm (fundus-lower uterine segment) x *** cm (anterior - posterior)]. The cervix measures *** cm in length x *** cm in diameter. The cervical cuff extends up to *** cm anteriorly and *** cm posteriorly from the cervix. The endometrial cavity measures *** cm in length, up to *** cm wide. The endometrium measures *** cm in average thickness. The myometrium ranges from *** to *** cm in thickness. The right ovary measures *** x *** x *** cm. The left ovary measures [***x***x*** cm]. The right fallopian tube measures *** cm in length [*with/without*] fimbriae x *** cm in diameter, with a *** cm average luminal diameter. The left fallopian tube measures *** cm in length [*with/without*] fimbriae x *** cm in diameter, with a *** cm average luminal diameter.

The cervical mucosa is remarkable for a lesion located in the [*anterior/posterior aspect*] extending from *** o'clock to *** o'clock, which measures *** x *** cm in surface area. Sectioning reveals the lesion [*describe cut surface*] and has a *** cm maximum thickness. The lesion measures *** cm from the inked paracervical soft tissue margin. The lesion [*does/does not*] extend into the vaginal cuff. The lesion [*does/does not*] extend to the lower uterine segment. The lesion [*does/does not*] extend into the uterus. [**OR** if no tumor identified – "*The cervix is remarkable for a defect measuring *** cm in diameter which extends *** cm into the cervix. No residual tumor is grossly identified*".]

The uterine serosa is [*pink, smooth, glistening, unremarkable/has adhesions*]. The endometrium is [*tan-red, unremarkable, describe presence of lesions/polyps*]. The myometrium is [*tan-yellow, remarkable for trabeculations, cysts, leiomyoma-(location, size)*]. The right and left ovary are [*unremarkable, show atrophic changes, describe presence of lesions*]. The right and left fallopian tubes are [*grossly unremarkable, remarkable for adhesions, show evidence of prior tubal ligation, etc*]. No additional lesions or masses are grossly identified. Representative sections are submitted [*describe cassette submission*].

Gynecologic Pathology Grossing Guidelines

Ink Key:
Black-right
Blue-left

Cassette Submission: 20-25 cassettes

- Right and left parametrial margins
- Anterior vaginal cuff margin
- Posterior vaginal cuff margin
- **Cervix with and without tumor**
 - o **Show closest approach to inked soft tissue margin**
 - o **If no gross tumor or no gross residual tumor, amputate the cervix and submit cervix in a clockwise fashion, by quadrants (12-3:00; 3-6:00; 6-9:00; 9-12:00)**
 - **12:00 Anterior cervix**
 - **6:00 Posterior cervix**
- **LSIL:** submit standard uterus sections
- **HSIL or prior conization:** submit entire cervix, sequentially by quadrants. Confirm with attending prior to submitting if this will require many cassettes
- Anterior and posterior lower uterine segment
- Uterine fundus
- Right and left fallopian tube
 - o 2 cross sections and bisected fimbriated end
- Right and left ovary
 - o Representative cross sections if uninvolved
- All lymph nodes, if present
