

## Pediatric Pathology Grossing Guidelines

### **LYMPHOMA**

For intraoperative handling and submission of tissue for ancillary studies, please review the general pediatric pathology guidelines, and discuss the case with the Hematopathology attending, or with Dr. Goldstein, before proceeding.

UCLA is a participating member of the Children's Oncology Group (COG) and a tissue bank for pediatric neoplasms maintained at the COG Biopathology Center (BPC) at Nationwide Children's Hospital/Ohio State University. Many pediatric oncology patients will be randomized into therapeutic protocols. Since the protocols and trial studies often change, better to check if any special things need to be done BEFORE proceeding with dissection and fixation.

Please refer to the Hematopathology Guidelines for sample dictation and general instructions. College of American Pathologists' pediatric tumor synoptic reports should be used, and the full CAP protocols may be reviewed for additional information.

All COG treatment protocols require central pathology review, and in some cases, an expedited rapid review is necessary to determine the correct initial treatment regimen for the child. Therefore, for all children registered on protocol, a complete duplicate set of sequential slides from each block should be ordered at the time of initial histologic processing.

For all pediatric tumors for which there is sufficient material available, after satisfying protocol requirements and our needs (including our TPCL), additional frozen tissue can be submitted to the BPC. TPCL personnel will be available during regular work hours to assist with the procurement of tissue for COG protocols and tissue banking.

### **Chromosomal Analysis**

It is advisable to save the tissue for chromosomal and/or molecular analysis of the following neoplastic disorders:

1. Burkitt and other non-Hodgkin lymphomas
2. Acute leukemia and granulocytic sarcoma

If chromosome analysis is needed on any pediatric tumor, obtain **RPMI medium** from tubes provided by the Flow Cytometry Laboratory in the Surgical Pathology refrigerator. Alternatively, the Cytogenetics Laboratory can provide RPMI media. You may call the Cytogenetics Lab at x41287 and they will provide you with the RPMI media. This lab is open Monday through Friday. Please contact Dr. Sue Kang (P. 95293) for after hours or weekend requests if the Surgical Pathology supply is out or old. Fresh tissue of 2- 3 mm size is OK for the study

## Pediatric Pathology Grossing Guidelines

### Specific Specimen Processing

Please handle lymphoma specimens as per Hematopathology procedures. The diagram below may be used to guide tissue triage. Specific requirements for COG protocols, if the patient is registered, will be provided prior to specimen receipt.
