UNDERSTANDING 3D MAMMOGRAPHY

THE BASICS
One in eight women in the United States is diagnosed with breast cancer in her lifetime. A mammogram is a screening test that helps detect breast cancer at an early stage, before there are any signs or symptoms or a lump is felt.

- More than 39 million mammograms are performed annually in the United States.
- Most women will have their first mammogram between 40 and 50 years old.
- Most women have a repeat exam every one to two years until they are about 75 years old.
- 3D mammography, or breast tomosynthesis, is a new technology that is available in many UCLA Health locations.

2D VS. 3D MAMMOGRAPHY: WHAT’S THE DIFFERENCE?

<table>
<thead>
<tr>
<th>TECHNOLOGY</th>
<th>2D MAMMOGRAM</th>
<th>3D MAMMOGRAM</th>
</tr>
</thead>
<tbody>
<tr>
<td>Patient Experience</td>
<td>Breast is compressed between two plates</td>
<td></td>
</tr>
<tr>
<td>Availability</td>
<td>Widely available</td>
<td>Available at 6 UCLA locations</td>
</tr>
<tr>
<td>Imaging Technology</td>
<td>Takes one mammogram image of the breast from the top and one from the side, which may create images with overlapping tissue.</td>
<td>Takes 15 images of the breast in an arc from the top and from the side which are then transformed into multiple non-overlapping thin slices through the breast tissue.</td>
</tr>
<tr>
<td>Imaging Resolution</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Length of Imaging Study</td>
<td>2-3 seconds</td>
<td>4 seconds</td>
</tr>
</tbody>
</table>

The small star-like mass in the upper breast, which turned out to be breast cancer, is not visible on 2D mammography, but clearly seen on 3D mammography.

WHEN AVAILABLE, UCLA RADIOLOGISTS PREFER 3D MAMMOGRAPHY

- 3D mammography is approved for all women. It is especially beneficial for women with dense breasts.
- 3D mammography makes finding abnormalities easier.
- 2D mammography is still an effective screening option for most women.

COST OF 3D SCREENING MAMMOGRAPHY

- UCLA Health may collect a $45 surcharge for 3D screening mammography at check-in, which is reimbursed if the 3D portion of the study is covered by insurance. All 2D screening mammograms are covered.

BENEFITS OF 3D MAMMOGRAPHY

- Leads to fewer follow-up tests
- 15% reduction in follow-ups
- Detects additional cancers. About one to two more breast cancers detected for every 1,000 women screened
- 40% more invasive cancers found with 3D exam

UCLA LOCATIONS THAT OFFER 3D MAMMOGRAPHY

Manhattan Beach | North Hollywood | Palos Verdes | Santa Clarita | Santa Monica | Westlake Village | Westwood
