

## **GASTROINTESTINAL PATHOLOGY GROSSING GUIDELINES**

**Specimen Type:** SLEEVE GASTRECTOMY

**Procedure:**

1. Measure the length, range of diameter or circumference, and wall thickness of resected portion of stomach.
2. Describe the appearance of serosa and mucosa

**Gross Template:**

**MMODAL COMMAND: INSERT ESOPHAGECTOMY**

It consists of an [*intact, disrupted*\*\*\*] sleeve gastrectomy measuring [\*\*\*] cm in length, [\*\*\*] cm in open circumference. There is a [\*\*\*] cm in length staple line at the resection margin. The perigastric fibroadipose tissue extends up to [\*\*\*] cm from the gastric wall.

The serosal surface is [*pink-tan and unremarkable/ remarkable for describe adhesions, plaques, full-thickness defects (perforations or enterotomies)*\*\*\*]. The mucosal surface is [*brown-tan and unremarkable/ remarkable for [describe ulcers/erosions/polyps/loss of folds/nodularity* \*\*\*]. No lesions are grossly identified. [*Describe lesions/polyps- if present.*\*\*\*] Representative sections are submitted in cassette [\*\*\*].

**Cassette Submission:** 1 cassette (additional cassette(s) if necessary to demonstrate pathology)

- Submit two representative sections of stomach wall in one cassette
  - o Include area of congestion or any other abnormal findings
- Submit all polyps entirely
