Our Mission

To improve health, well-being, and the quality of life of people by blending the best of Western and Traditional East Asian healing traditions to provide healthcare that is safe, effective, affordable and accessible.

Founded in December 1993, the Center has established a model system of comprehensive care with emphasis on health promotion, disease prevention, treatment and rehabilitation through an integrated practice of East-West Medicine. With philanthropic support, the Center launched our Education Programs in 1995. Education and training continue to permeate every aspect of the Center's activities.
