ACHA Webinars Presents:

The Liver and Legs in the Adult with a Single Ventricle

Wednesday, September 9, 2015, 7 p.m. – 8 p.m. EDT

Presenter: Ian Harris, MD

About the Webinar

The Fontan operation was a technological breakthrough that changed the surgical treatment of patients with complex single ventricle defects. Despite its early success, the unique structure of the Fontan has caused "bumps" in the road—such as liver and leg issues—later in life. Join us to hear Dr. Ian Harris, noted ACHD cardiologist, review the reasons for this and what it means for you. If you are an adult who has had the Fontan operation, you don't want to miss this webinar. Register today.

About the Presenter

Dr. Ian Harris earned his medical degree from UCSF School of Medicine and completed his residency in internal medicine at Barnes-Jewish Hospital. Dr. Harris returned to UCSF Medical Center to complete his cardiology and

adult congenital cardiology fellowships, as well as a research fellowship in developmental biology, at the UCSF Cardiovascular Research Institute. He is board certified in both internal medicine and cardiovascular disease and is the director of the ACHD Service at UCSF. He is also a member of the ACHA Medical Advisory Board.

About the Adult Congenital Heart Association

The mission of the Adult Congenital Heart Association (ACHA) is to improve and extend the lives of the millions born with heart defects through education, advocacy and the promotion of research. If you would like to find out more about our programming, visit our website, www.achaheart.org. To support ACHA's mission to improve and prolong the lives of heart defect survivors, you can make a donation on our website.

This webinar was made possible in part by unrestricted educational grants from Actelion Pharmaceuticals US, Inc., Gilead Sciences, and St. Jude Medical Foundation.
