Every day **227 people** become homeless in L.A.
Living on the street can take more than **20 years** off one’s life.

The UCLA Health Homeless Healthcare Collaborative will provide:

- **Medical screenings**
- **Primary care**
- **Urgent care**
- **Preventive care and vaccinations**
- **Continuity care for chronic medical conditions**
- **Primary psychiatric care**
- **Referrals to housing and social services**

Who are the unhoused people in L.A.?

- **20%** are families with children
- **17%** are living with a physical disability
- **29%** have experienced domestic violence

The primary causes of homelessness include:

- Increasingly unaffordable housing
- Inequitable access to health care
- Stagnant wages
- Systemic racism

Unhoused populations are more vulnerable to disease, and often can’t access care.

Unhoused people suffer higher rates of:

- Tuberculosis
- Hypertension
- Diabetes
- Asthma
- HIV/AIDS
- Hospitalizations
