

## LUNG MRI TO EVALUATE PULMONARY FUNCTION IN PATIENTS WITH INTERSTITIAL LUNG DISEASE (ILD)

Many people have breathing or lung symptoms. If you are an adult aged 18 years or older and have been diagnosed with ILD, you may be eligible to participate in this research study. This study evaluates how your lungs look and function using a lung MRI. There is no intravenous contrast used in this exam, and the research scan typically takes 30 minutes, and no more than 45 minutes. Your participation can help researchers evaluate the information lung MRI can provide to patients and doctors.

There is no fee to participate in the study. You may receive up to \$45 for your participation. Your physician may discuss this study with you, and if you are interested in participating, your physician can refer you to our study team so that we may contact you, or you may contact Renato Escobar, Clinical Research Coordinator, by phone (310.956.6161) or by email ([RAescobar@mednet.ucla.edu](mailto:RAescobar@mednet.ucla.edu)). The Principal Investigator, Dr. Lea Azour, may also be reached at [lazour@mednet.ucla.edu](mailto:lazour@mednet.ucla.edu) should you have any questions. **If you choose to respond by email, do not include any sensitive health information, as the confidentiality of emails cannot be guaranteed.**
