

CNRC: A department-wide Precision Health Initiative, providing resources for discovery and innovation for neurologic conditions.

CNRC Enrollment and Biobanking:

Investigators can utilize CNRC's universal IRB and HIPAA consent to build cohorts of interest, including studies of unique populations, rare disorders, or common disease in their patients. Integrate it directly into your existing study IRB. CNRC staff can consent patients, collect DNA and other unique biospecimens for your study. The biobank already includes thousands of DNA and RNA samples, and hundreds of plasma and serum samples, as well as specialty collections of CSF, fibroblasts, tissue biopsies, urine, PBMCs, cell-free DNA or RNA, and others. Additional samples types may be available on request.

Investigators can request a meeting to discuss using data or samples from the biobank by submitting an inquiry to dywong@mednet.ucla.edu

Include the following information:

1. PI name and contact information
2. What you are requesting
 - a. banked samples and/or data
 - b. prospective collection of samples and/or data
 - c. both
3. What phenotypes are you interested in?
