About the Speaker

Alison Meadows received her PhD in bioengineering from the University of Pennsylvania in 1993. The patient population for her dissertation research included infants with hypoplastic left heart syndrome; thus drawn to the field of complex CHD, she matriculated at University of Pennsylvania School of medicine (1994-1998). At various institutions, Dr. Meadows completed her pediatric residency, a pediatric cardiology fellowship, and advanced fellowships in cardiac MRI and adult congenital heart disease. Following training, Dr. Meadows served on the faculty at the Children's Hospital Boston/Brigham and Women's Hospital from 2005-2007, and then at University of California San Francisco (2007-2010). She then accepted the position to develop an Adult Congenital Heart Disease Program for Northern California Kaiser Permanente. Dr. Meadows, an ACHA Medical Advisory Board Member, remains quite active in the field, participating in AHA, ACC, and ACHA activities, including the development of practice guidelines and program accreditation. She is passionate about the care of adults with CHD and feels privileged to care for these patients.

About the Adult Congenital Heart Association

The mission of the Adult Congenital Heart Association (ACHA) is to improve and extend the lives of the millions born with heart defects through education, advocacy and the promotion of research. If you would like to find out more about our programming, visit our website, www.achaheart.org. To support ACHA's mission to improve and prolong the lives of heart defect survivors, you can make a donation on our website.

This webinar was made possible in part by unrestricted educational grants from Actelion Pharmaceuticals US, Inc., Gilead Sciences, St. Jude Medical Foundation and AstraZeneca.
