

# Urology

## Ready to Care for You

### Routine and Urgent Urological Care Available

UCLA Urology is ready and prepared to welcome back all patients for routine and urgent urological care. This includes patients who would like to schedule an urgent or elective procedure, such as cystoscopy, vasectomy, prostate biopsy or neonatal circumcision. This also includes patients who require urgent or ongoing attention for the full range of urologic conditions, such as women's pelvic health issues, men's health concerns, kidney stones, BPH, urethral strictures, voiding dysfunction, pediatric conditions and urologic cancer. Keep your health care on track and schedule your appointment today.

### Keeping you safe

We have rigorous infection prevention policies in place in all of our sites:

- Diagnostic COVID-19 testing for patients prior to surgeries and procedures
- Pre-screening for patients, visitors and staff before they enter a medical clinic or hospital, which includes a temperature check and symptom monitoring
- Visitor restriction policies
- Universal masking
- Physical distancing in all shared spaces
- Enhanced disinfection and sterilization procedures in exam rooms, on all machines after every patient, and on high-touch surfaces, such as elevator buttons and digital screens

### SCHEDULING

We can accommodate a same day appointment for your routine or urgent urological needs, and can offer a telemedicine appointment, if appropriate.
