**WESTWOOD UPDATE:**

**Construction Start**

**Exterior Aesthetic Improvements and Signage to Westwood Plaza**

Construction has begun on the exterior improvements at UCLA Medical Plaza. Enhancements include new light poles and lighting, landscaping within existing planters and updated wayfinding signage. The overall goal is a cleaner, safer and more aesthetically pleasing environment for patients and staff with significantly improved wayfinding.

Construction fencing and barricades are in place to enclose landscape and walkways as needed. The pedestrian walkway between the driveways is closed for the duration of construction. Pedestrian travel around the plaza and building access will not be affected. Temporary signs are in place for both pedestrian and vehicular routes.

Thank you for your continued patience as UCLA Health makes improvements to our healthcare environment.

**SANTA MONICA UPDATE:**

**SMUMC Medical Surgical Suite Opens**

**16-Bed Licensed Unit for Patient Care**

The Medical and Surgical Unit at Santa Monica UCLA Medical Center is officially licensed by the Department of Public Health and open for patient care. The project renovated approximately 15,000 square feet on the A-Level of the Merle Norman Pavilion to create a state-of-the-art facility featuring 16 licensed, adult telemetry beds in private rooms. The unit also features a bariatric bed with ceiling lift, convenient wall mounted computers, and latest call light system that enables patients to request medication, water or assistance by pushing a button ultimately improving patient care and clinical efficiency.

Thank you to all Santa Monica staff for their collaboration and patience during construction. The project is now complete.
COMMUNITY UPDATE:

Calabasas Medical Office Building
New Emergency Generator, ADA Improvements and Signage Finalized
Coming Soon - Pediatrics, Blood Draw Laboratory and EIMG

Site work improvements to the Calabasas Medical Office Building, located at 26585 Agoura Road, are scheduled to complete in December. The project includes upsizing of existing sewer and water lines serving the building and installation of a 150 KW generator to support critical medical equipment and building systems. It also includes code-required ADA accessibility upgrades to the path of travel from the public street sidewalk to the building entrance. Building top signage, branding, and wayfinding were designed to maximize ease of access to the property. The upgrades prepare the 50,000 square foot facility for its intended use as medical outpatient clinics for patients of UCLA Health and residents of the Calabasas area, and as an alternative to Westwood and Santa Monica for services.

Pediatrics, Blood Draw Laboratory, a Primary Care Suite dedicated to the Entertainment Industry Medical Group (EIMG), and shared common area space will open to patients beginning April 2019. Over the following two years, the balance of the building will be improved to include an Imaging Center (Interventional Radiology, MRI, PET, PET/CT, Ultrasound, and X-ray), a licensed Ambulatory Surgery Center (including three operating rooms), a regional Sterile Processing Department, Ophthalmology, Urology – Obstetrics & Gynecology, and Head & Neck (including Audiology and fitting room) clinics. A gurney-sized elevator will be added for servicing the clinics.
